

Early detection of life threatening heart disorder, stroke and other diseases is possible through the use of Vascular Testing procedures performed within hospitals, outpatient centers and physician's offices. While these tests are helpful, there are many facets that contribute to an accurate diagnosis based on Vascular Testing. The skill of the technologist performing the examination, the type of equipment used, the background and knowledge of the interpreting physician and quality assurance measures are each critical to quality patient testing.

**Baptist Hospitals of Southeast Texas has been granted a three-year term of accreditation in Vascular Testing in the areas of Peripheral Arterial Testing by the Intersocietal Accreditation Commission (IAC).**

Accreditation by the IAC means that BHSET has undergone a thorough review of its operational and technical components by a panel of experts. The IAC grants accreditation only to those facilities that are found to be providing quality patient care, in compliance with national standards through a comprehensive application process including detailed case study review.

IAC Accreditation is a "seal of approval" that patients can rely on as an indication that the facility has been carefully critiqued on all aspects of its operations considered relevant by medical experts in the field of Vascular Testing.

Baptist Hospital of Southeast Texas has been serving the community for almost 60 years. Our health care system is dedicated to providing quality health services in a Christian environment in order to improve the health care of people of Southeast Texas.
