Section 1:

Community Health Needs Assessment

EXECUTIVE SUMMARY

Executive Summary

A comprehensive, six-step community health needs assessment (“CHNA”) was conducted for Baptist Hospitals of Southeast Texas (BHSET) by Community Hospital Corporation (CHC). This CHNA utilizes relevant health data and stakeholder input to identify the significant community health needs in Jefferson and Orange Counties in Texas.

The CHNA Team, consisting of leadership from BHSET, reviewed the research findings in October 2024 to prioritize the community health needs. Six significant community health needs were identified by assessing the prevalence of the issues identified from the health data findings combined with the frequency and severity of mentions in community input.

The list of prioritized needs, in descending order, is listed below:

- 1.) Access to Mental and Behavioral Health Care Services and Providers
- 2.) Continued Recruitment & Retention of Healthcare Workforce
- 3.) Prevention, Education and Services to Increase Community Awareness and Address High Mortality Rates, Chronic Diseases, Preventable Conditions and Unhealthy Lifestyles
- 4.) Need for Increased Emphasis on Collaborative Continuum of Care
- 5.) Access to Affordable Care and Reducing Health Disparities Among Specific Populations
- 6.) Continued Focus on Community Infrastructure

The CHNA Team participated in a prioritization process using a structured matrix to rank the community health needs based on three characteristics: size and prevalence of the issue, effectiveness of interventions, and their capacity to address the need. Once this prioritization process was complete, the BHSET leadership discussed the results and decided to address five of the six prioritized needs in various capacities through a hospital specific implementation plan. “Continued Focus on Community Infrastructure” is not directly addressed in the hospital’s implementation plan. “Continued Focus on Community Infrastructure” is not a core business function of the hospital and the leadership team felt that resources and efforts would be better spent addressing the other prioritized needs.

Hospital leadership has developed an implementation plan to identify specific activities and services which directly address the top five priorities. The objectives were identified by studying the prioritized health needs, within the context of the hospital’s overall strategic plan and the availability of finite resources. The plan includes a rationale for each priority, followed by objectives, specific implementation activities, responsible leaders, and annual updates and progress (as appropriate).

The BHSET Board reviewed and adopted the 2025 Community Health Needs Assessment and Implementation Plan on March 24, 2025.

Priority #1: Access to Mental and Behavioral Health Care Services and Providers

Data suggests that residents in Jefferson and Orange Counties do not have adequate access to mental and behavioral health care services and providers. Jefferson and Orange Counties have a higher ratio of patients per mental health care provider as compared to the state as well as the nation. Both Jefferson and Orange Counties have a higher percentage of adults with depression and adults who expressed they had frequent mental distress than the state.

Many interviewees mentioned the underserved population, specifically, as experiencing difficulties accessing mental and behavioral health resources. One interviewee stated: "...In terms of the underserved population (low income, homeless, etc.), we have a strong sector of the community with mental health issues. They are plaguing law enforcement and the jail system. There is some available inpatient care, but it is not nearly adequate..." Several interviewees expressed excitement for the expansion of the BHSET mental and behavioral health facility and the psychiatry residency program. One interviewee stated: "...we are excited about the expansion of the mental health facility at Baptist. I know law enforcement is excited about it." Another interviewee stated: "Baptist has recently started a psychiatry residency program and hopes to retain some of them in the community."

There were conflicting interviewee comments about accessibility to see a mental and behavioral healthcare provider. One interviewee stated: "It's easy to get in to see a therapist. It's fairly easy to see a psychiatrist." Another interviewee stated: "It's more difficult than it should be. People don't know how to access the provider in a timely manner." A couple of interviewees expressed desire for more education about local, available programs to improve mental and behavioral health access. Interviewees also discussed long wait times and how that may potentially worsen mental health conditions. One interviewee stated: "...You may set up an appointment four weeks after something comes up, but in four weeks, things can go downhill pretty fast. We don't have enough mental health services or training in the area for mental health issues."

Interviewees also discussed the need for additional mental and behavioral health providers accepting insurance. One interviewee stated: "There's a lot of people in the community who have insurance looking for psychiatric care. There are not a lot of providers for private pay. A few take cash payments but don't take insurance because they don't want to deal with the hassle. That's difficult for the people who need the care and pay cash." Lastly, one interviewee noted appreciation for telehealth options for mental health. One interviewee: "I love telehealth, including for mental health. I use it especially for therapy."

Several interviewees discussed needs for adolescent mental health services, specifically a need for more psychiatric rehab services. A couple interviewees noted the increased drug use among the youth population. One interviewee mentioned the growing mental health issues and demand for services is leading to long wait times as well as some local psychiatrists who are not accepting certain insurances which is leading to limited access to psychiatric care. One interviewee stated: "Mental health is a big and expanding issue for the youth. We are seeing kids now who have no coping skills. So many kids are suicidal and can't deal with school or family life. The demand for services has skyrocketed. Almost all kids now have CHIP and Medicaid if they don't have private insurance. However, the lack of psychiatric coverage is concerning. We have about four psychiatrists and APRNs that do psychiatric care. Outside of that, there are only 1-2 in the region, and they generally work with commercial private insurance. It takes about two months to get in to see a psychiatrist. It's gotten better but I don't see it improving much."

Priority #2: Continued Recruitment & Retention of Healthcare Workforce

Data suggests both Jefferson and Orange Counties have a higher ratio of patients per primary care provider as compared to the state as well as the nation. Orange County has a higher ratio of patients per dental care provider as compared to the state as well as the nation. Jefferson County has a higher percentage of preventable hospital events per 100,000 when compared to the state. Additionally, both counties have several Health Professional Shortage Area designations as defined by the U.S. Department of Health and Human Services Health Resources and Services Administration (HRSA).

With regards to specialty care, interviewees expressed appreciation for the hospital's use of telemedicine for specialty care appointments. One interviewee stated: "Baptist has done such a great job with telemedicine, which I think is super helpful." However, interviewees had conflicting comments on wait times for specialty care services. One interviewee stated: "I would say specialty care has a wait time of 2 to 3 weeks to see a..."

Priority #2: Continued Recruitment & Retention of Healthcare Workforce (continued)

...specialist,” while another interviewee stated, “Conservatively, it’s a couple of months to see a specialist but sometimes it could be even longer.”

Several interviewees discussed the need for pediatric subspecialties. One interviewee stated: “We have a lot of pediatricians, but in terms of specialists, there does seem to be a gap.” Interviewees noted that some patients prefer to see a physician over an advanced practitioner. One interviewee stated: “I think accessibility is okay, but that definitely depends on the size of the practice and how busy they are. With specialists, I know a lot of patients don’t like seeing mid-level providers.” Interviewees mentioned appreciation for the local cancer center saying, “I’ve heard people are very happy with our cancer center we have in Beaumont. I’ve come across people who decide to stay here for their cancer treatment instead of going to Houston, which speaks volumes.” A couple interviewees noted the high turnover of OB/GYN providers which is leading to limited availability of services. One interviewee stated: “There seems to be a lot of turnover with local facilities and practitioners for women’s health. In Orange, it really just provides screenings, ultrasounds, and preventative scans, like mammograms. There is nothing in Orange County, so people go to Jefferson County or some folks go to Lake Charles for that type of service.”

A couple interviewees mentioned the limited accessibility to local specialty care services which is leading to outmigration to Houston and Lake Charles as well as challenges in seeing certain specialty care providers, particularly for the Medicaid population. One interviewee stated: “Most specialists do not accept Medicaid at all, traditional or managed care, with the exception of a couple of cardiologists in town who only see a limited number of Medicaid patients.” Specific specialties mentioned as needed include Neurology (general and pediatric), Gastroenterology, Mental health, OB/GYN, Cardiology, Dermatology, Endocrinology, Oncology, Orthopedics and Pulmonology.

With regards to dental care, interviewees discussed the limited access to pediatric and specialized dentists in Orange County. Additionally, there were conflicting interviewee opinions on the accessibility of local dentists as well as mentions about the lack of prioritization of dental health due to: cost of care and inadequate insurance coverage. One interviewee stated: “I feel like we have plenty of dentists. There are very few pediatric dentists. Other than that, parents just bring their kids to their regular dentist.” Another interviewee stated: “I do not think there’s an adequate number of dentists. A lot of people don’t seek dental care as a focus. In some areas, it’s seen as expensive and unaffordable.” Another interviewee stated: “It’s pretty accessible, but the frustrating part is that it is expensive, and insurance often does not cover it. If it does, it’s at a minimum level that people can’t afford. Some dentists might offer reduced prices, but I have not seen that myself. Dentists do root canals and crowns. Some do it in-office, and some refer to a specialist. If you are in pain, you can get in to be seen in a pretty good amount of time.”

A couple interviewees noted the perceived limited access to care due to local dentists not accepting new patients. It was mentioned that there’s a greater difficulty for certain populations like the indigent, or those with Medicaid in accessing dental care providers. One interviewee stated: “For our indigent population, there’s a bit of a struggle. There aren’t a lot of providers that accept state payment for dental care.” Lastly, a couple interviewees acknowledged that there are local dental options that assist certain populations like the indigent or those with Medicaid. One interviewee stated: “People with dental insurance find accessibility pretty fast. For Medicaid clients, there are dental centers, like Lovett Dental in town that generally meets the needs of that population. We have dental centers with multiple services and prices for Medicaid and Managed Medicaid patients. For certain uninsured patients, they can receive some care but it’s extremely limited. Lamar University still has a dental hygiene program, so patients can go get free dental cleanings.”

It was noted from interviewees that there are difficulties recruiting providers to the area due to the perceived poor quality school system. One interviewee stated: “I would focus on engaging providers to stay here and improving the local infrastructure and schools. That is a major draw for families wanting to raise children. A lot of times we get people here to talk to them but Beaumont is not really pretty on the outside. We have a poorly-rated school district. I think we have trouble getting people in the door.”

Priority #3: Prevention, Education and Services to Increase Community Awareness and Address High Mortality Rates, Chronic Diseases, Preventable Conditions and Unhealthy Lifestyles

Data suggests that higher rates of specific mortality causes and unhealthy behaviors warrants a need for increased preventive education and services to improve the health of the community. Heart disease and cancer are the two leading causes of death in Jefferson and Orange Counties and the state. Jefferson and Orange Counties have higher mortality rates than Texas for the following causes of death: diseases of heart; malignant neoplasms; COVID-19; chronic lower respiratory diseases; Alzheimer's disease; accidents (unintentional injuries); cerebrovascular diseases; diabetes mellitus; nephritis, nephrotic syndrome and nephrosis; chronic liver disease and cirrhosis; breast cancer (female); and lung and bronchus cancer. Additionally, Jefferson County has a higher colon & rectum cancer mortality rate than the state.

Both Jefferson and Orange Counties have higher prevalence rates of chronic conditions such as diabetes for Medicare population, obesity for the adult and Medicare population, arthritis (adult), asthma (adult), hypertension for the Medicare population and those with a disability (adult) than the state. Both counties have higher percentages of residents participating in unhealthy lifestyle behaviors such as physical inactivity, binge drinking and smoking than the state. Jefferson County has a higher prevalence rate for adults with diabetes than the state. With regards to maternal and child health, Jefferson and Orange Counties have higher rates of low birth weight births, higher rates of premature births and higher teen (age 0-19 years) birth rates than the state. Data suggests that Orange County residents are not appropriately seeking preventive care services, such as timely mammograms for Medicare beneficiaries and those Medicare beneficiaries who have ever received the pneumonia vaccine. Both Jefferson and Orange Counties have a lower percent of Medicare beneficiaries who have received their flu vaccine in the past year. Jefferson County has higher prevalence rates of communicable diseases such as chlamydia, gonorrhea and HIV/AIDs than the state.

Several interviewees expressed appreciation for the local programs and resources in the community, including but not limited to: preventative screenings; the local food bank; parks and walking trails; and BHSET hosted events. One interviewee stated: "Prevention is always the hardest part. We do have a lot of programs focused on breast and prostate health. We have a local food bank here. There are some parks and walking trails. Compared to a lot of cities, we are in pretty good shape." Another interviewee stated: "For our area, we have a substantial amount of resources available for health and fitness. You can't make anybody take advantage of them. There are people in the fitness community who say our community doesn't do enough. If you've lived in other cities, this city has average, if not above-average, resources for its size."

Interviewees emphasized the desire for more options or resources for those who are lower income as well as the need for better access to healthy food options and education about nutrition. One interviewee stated: "I wish there were more cost-effective options for the lower-income. We have a bunch of gyms in the area but some won't be able to afford the membership." Another interviewee stated: "There are a lot of studies regarding food deserts in our area and several initiatives to address that. Access around healthy eating and being intentional about it is essential." Interviewees brought up several chronic conditions and risky behaviors that they've seen in the community like: cancer; diabetes; hypertension; substance abuse; and increased syphilis rates. One interviewee stated: "A lot of areas are affected by the refineries. The cancer rate is high and the diabetes rate is elevated due to diet. Diabetes is a huge issue, along with uncontrolled hypertension and substance abuse." One interviewee expressed a desire for increased community education surrounding healthy lifestyle behaviors. One interviewee stated: "Having more community outreach and education on preventable issues, like healthier lifestyles, is crucial. Diabetic patients often don't eat right, don't take their meds, and don't see doctors regularly. If we had more education that goes out into the field, it could make a difference."

It was noted by several interviewees that there are high levels of food insecurity and the limited amount of local grocery stores is leading to poor nutrition and a range of health problems. One interviewee stated: "Health concerns related to food insecurity are critical. When families don't have access to food, it leads to other problems. A grocery store in Vidor, TX is closing, and there's another in the south end of Beaumont that is also closing. Not having a grocery store close by is definitely a struggle, leading to issues with diabetes, hypertension, and other chronic diseases that can be impacted by poor health decisions and options." One interviewee discussed an opportunity for enhanced collaboration among organizations as well as...

Priority #3: Prevention, Education and Services to Increase Community Awareness and Address High Mortality Rates, Chronic Diseases, Preventable Conditions and Unhealthy Lifestyles (continued)

...a need for additional green spaces and wellness programs to help promote healthy lifestyle choices and improve quality of life. One interviewee stated: “We should be putting in some green spaces and have community wide wellness initiatives. More collaboration among healthcare entities in the area is essential. It’s not just about the money; it’s about working together to identify solutions.” Lastly, one interviewee expressed the desire to see a YMCA come into Beaumont and stated: “Quality of life is at the top of my list. That includes providing amenities that encourage people to get outside. Building healthier lifestyles through parks, trees, walking paths, bike paths, and wide open spaces where people can safely play. We used to have a YMCA. A facility like that would allow families to gather and make it affordable for them to participate in different programs, like learning to swim.”

Priority #4: Need for Increased Emphasis on Education and Awareness of Existing Health Care Resources

Interviewees mentioned the need for additional education on healthcare options as well as the difficulty educating the community due to the lack of a unified way to reach patients. One interviewee stated: “Communication is key. We have people willing to teach these individuals, but we don’t have a way to effectively reach them because there isn’t a single source where they get their information. It’s hard to get a good turnout. There are several pockets in the county that don’t have internet access.” Interviewees noted the perceived delaying or foregoing care due to lack of knowledge about healthcare. A few interviewees discussed the lack of understanding next health steps or seeking follow up care leading to patient readmissions. One interviewee stated: “The back of the discharge papers has information. But does the patient read it and comprehend it? They aren’t going to look at that. Finding a way to close the loop on that is important. A lot of times, the patient will be back in 90 days.” Interviewees discussed the need for more community engagement and marketing of local resources due to challenges in reaching vulnerable populations and the lack of awareness of existing programs and resources. One interviewee stated: “There’s a lot going on that’s not hitting everyone. They’re trying to find ways to reach the homebound folks or the people who are really having issues. The hospital is doing a good job in hosting events, but there’s a challenge in reaching the most vulnerable.” Another interviewee stated: “You don’t see many people doing outdoor activities. There aren’t a lot of communities that have sidewalks. I don’t see much healthy eating or marketing around our food banks and I know they are active here.”

It was noted by interviewees that knowledge deficits of available services is leading to use of the ER, particularly for the low income and uninsured populations. Interviewees mentioned confusion about the appropriate healthcare facility to use based on patient’s symptoms leading to: overuse of the ER and using EMS for non-emergent situations. One interviewee stated: “You have the hospital ER, freestanding ERs, ‘doc-in-a-box’ and urgent cares. How do people know where to go? Which one is really the appropriate option when you don’t have a primary care provider? I think some people know, and others will just go to the ER thinking it’s urgent care. I do think this is very confusing.” Another interviewee stated: “A lot of people don’t know what an emergency is and what is not. They are scared, but once EMS gets there and triages and makes the assessment, then they don’t want to go. Some need to go and refuse, while others demand to go but don’t really need emergency care.” Lastly, the need for education on insurance implications of selecting one type of facility over another for emergency care was mentioned by a couple interviewees. One interviewee stated: “There might need to be a heightened awareness of when to go to the private ER versus the hospital ER. There is some misunderstanding about insurance and what they cover at hospital ERs vs freestanding ERs. There could probably be some public service announcements that could run to build awareness.”

Priority #5: Access to Affordable Care and Reducing Health Disparities Among Specific Populations

Data suggests that some residents in the study area may face significant cost barriers when accessing the healthcare system. Jefferson and Orange Counties have higher unemployment rates than the state, as well as lower educational attainment rates than the state. Both Jefferson and Orange Counties have a lower median household income than the state, a higher percentage of families living below poverty than the state, a higher percentage of overall food insecurity, child food insecurity and a higher average meal cost when compared to the state. Jefferson County has a higher percentage of children living in poverty as well as a higher percentage of school students eligible for free or reduced price lunch. Jefferson and Orange Counties have a higher percentage of recipients who qualified for Supplemental Nutrition Assistance Program (SNAP) benefits and a lower percentage of those who...

Priority #5: Access to Affordable Care and Reducing Health Disparities Among Specific Populations (continued)

...graduated high school within four years than the state. Jefferson County also has a higher percent of people who do not own a motor vehicle when compared to the state.

Jefferson County has a higher rate of those adults (age 18-64) who are uninsured as compared to the state. When analyzing economic status in both counties, Jefferson County is in more economic distress than Orange County and other counties in the state. Additionally, Jefferson and Orange Counties are designated as Medically Underserved Areas, as defined by the U.S. Department of Health and HRSA.

Interviewees mentioned transportation barriers that are hindering access to care for specific groups such as individuals living in outlying areas as well as the low income and working poor. One interviewee stated: "Transportation and the lack of co-located providers are significant problems. Your primary care provider may be here, but you might have to travel somewhere else for a specialist or a procedure. For some of our outlying counties, it's harder." Additionally, several acknowledged that telemedicine has improved access to some, but rural areas still lack accessibility. One interviewee stated: "In general, rural accessibility to physicians or nurse practitioners is a significant concern. We've seen some improvement with telehealth, but there are still some rural pockets that lack accessibility—like Fannett."

Interviewees discussed the struggle between paying for medication versus essential expenses, particularly for the uninsured. One interviewee stated: "People are unable to afford their medication. It has to do with cost, especially for those without insurance. 'Do I pay for my medicine or my electricity?' Many people are walking around with hypertension but have no means of obtaining blood pressure medication." It was noted several times that the limited health options in the area are leading to ER and/or urgent care use which results in expensive bills. Additionally, a few interviewees perceived the overprescribing of medications for certain conditions is leading to increased costs and use of insurance. One interviewee stated: "Healthcare is expensive partly because we medicate a large percentage of problems that don't require medication. This makes care more expensive and necessitates insurance."

When discussing those individuals who may need long term care in the community, several interviewees noted the lack of local long term facilities leading to challenges like: transportation barriers, proximity to family and foregoing care. One interviewee stated: "We don't have any long-term care facilities or in-between options where they need to go for a few weeks to a month, like for a PICC line. They don't have transportation, so they stay in mid-county, which is an hour's drive. If they had a little bit of family support, that would help, but there just aren't those types of facilities. They go home, don't recover, and it's just a cycle. They come back to the hospital." Lastly, a couple of interviewees expressed desire for more collaborative support during a patient transition from one health setting to the next. One interviewee stated: "Perhaps we could streamline communication from one physician to another. If you have a heart condition, it would be helpful for your primary care physician to receive that information directly. Maybe just more cohesiveness of the doctors working together to help you. [Having] more of a team mindset when addressing the health of the patient." Another interviewee stated: "There are challenges in the transitional phase. Is the initial entity following through to conclusion, or are they saying it's your responsibility now? It needs to be more collaborative and follow that patient, whether that's verbal or otherwise. Transitioning to physical therapy from heart surgery was challenging. Even though it was in the same building, it felt like we were dealing with two separate businesses."

With regards to the elderly population, interviewees acknowledged that there is food insecurity for the elderly population, specifically for those that are homebound. Additionally, several interviewees discussed the difficulty navigating the different Medicare insurance options. One interviewee stated: "Navigating Medicare options is hard for the elderly to do. It's hard to find the right plan that fits you." One interviewee mentioned that there are limited facilities and services for people with Alzheimer's or who are in need of dementia care. It was noted that there is a need for additional education and assistance with local resources in the area. One interviewee stated: "Many seniors need an explanation of 211 services at the state level. A lot of times, extra help is needed. You have a lot of seniors who cannot navigate the system by themselves."

Several interviewees discussed the transportation barriers and limited housing options for the elderly. The low income senior population was discussed by a few interviewees as facing a greater challenge in affording medications and health care services. One interviewee stated: "A lot of the Medicare-eligible people are also low-income, so they're having a hard time paying copays or utility bills. Maybe adherence to their medication..."

Priority #5: Access to Affordable Care and Reducing Health Disparities Among Specific Populations (continued)

...has everything to do with their financial situation and not them wanting to take it.”

A couple of people mentioned the elderly population going to Houston for specialty care and limited support systems for the elderly which is leading to isolation. One interviewee mentioned the elderly have a desire to be seen by a physician versus an advanced practice provider. One interviewee stated: “I feel like when my in laws go to the doctors, sometimes they don’t even see their doctor. They see a nurse practitioner.” It was noted that there is a need for enhanced coordination and communication amongst providers for patient care by a couple interviewees. Lastly, one interviewee mentioned that a local pharmacy was closing and this will cause issues accessing medication. One interviewee stated: “We have one neighborhood in the north end of town and the Walgreens will close its doors in two weeks, so that will create a medication desert. The closest pharmacy by walking distance is 40 minutes away. There are some senior living apartments there and they will be out of medication access.”

When thinking about the youth population specifically, interviewees discussed how the lack of a children’s hospital is leading to outmigration or transferring patients to Houston. Additionally, interviewees mentioned the need for more recreational activities for the youth as well as migration of rural communities to Beaumont for care. One interviewee stated: “The quality of life for kids is lacking in terms of safe activities during their free time. The city has some great parks, but we are lacking traditional recreational and entertainment opportunities for the youth and the population at large. In terms of their health, we struggle with pediatric care in Beaumont. We go to Beaumont for doctors appointments and a large percentage of the population is doing the same thing—either Beaumont or Port Arthur.” A couple interviewees noted the need for increased education on preventive care for the youth. One interviewee stated: “We get a lot of graduates who either stay with their parents, move out, get a job, or get their own place. Kids aren’t being taught the importance of annual exams, making doctors visits a routine priority. So many from the younger generation don’t like calling or talking on the phone so they don’t make an appointment. Education on these aspects is important as they prepare for adulthood.” Lastly, there was concern by one interviewee about legislative efforts surrounding childhood immunizations which is leading to potential resurgence of preventable diseases. One interviewee stated: “In Texas, we have lawmakers trying to do away with childhood immunizations to attend school. I’m afraid that we will see a resurgence of diseases. A recent story discussed two teenagers who returned from a trip with rubella.”

When asked about which specific groups are at risk for inadequate care, interviewees spoke about teenagers/adolescents, elderly, low income/working poor, obstetric, racial/ethnic, Orange County residents, Hardin County residents, homeless and veterans. With regards to the teenagers/adolescents population, interviewees discussed the need for better quality of education; the need for mental health services, especially long term psychiatric care; healthy lifestyle and preventive care education; limited recreational activities; lack of a local children’s hospital; resources for teen pregnancy; drug abuse; and the need for post-foster care programs. For the elderly population, interviewees discussed transportation barriers; dementia, Alzheimer’s disease; food insecurity; and cost barriers to care. Low income/working poor residents were brought up as a subgroup of the population that may be disproportionately affected by the need for accessible childcare; cost barriers to care and insurance coverage; hourly shift limitation; long wait times for appointments; transportation barriers; limited availability of affordable housing; and education on establishing a primary care provider and how to take care of oneself. For the obstetric population, interviewees discussed the desire for more female providers.

Racial/ethnic groups were discussed as having a growing Hispanic population; underinsured, particularly for the Hispanic and African Americans; language barriers, particularly for the Hispanic; transportation barriers; perceived racial tension; fear of deportation; cultural challenges (Vietnamese, Hispanic, African American); and limited access to care (limited income, long wait times). Specifically for Orange County residents, interviewees discussed the limited adequate housing; lack of pediatric dentists; and transportation barriers. For Hardin County residents, interviewees discussed the lack of pediatricians; and that there is no county food bank. Homeless residents were discussed as being disproportionately challenged by a growing population, migrant as well as local homelessness; the limited number of shelters in the community, especially bridge housing; difficulty accessing shelters due to organization policies; mental health and drug abuse concerns; limited affordable housing; and fragmented continuum of care. Lastly, for the veteran population, interviewees discussed outmigration due to lack of a nearby VA hospital ; limited services available at the local VA clinic;...

Priority #5: Access to Affordable Care and Reducing Health Disparities Among Specific Populations (continued)

...the growing population; lack of education surrounding veteran benefits and what is available; mental health concerns; some homelessness; transportation barriers; challenges with providers accepting VA insurance; and lack of access to mental/behavioral health services.

PROCESS AND METHODOLOGY

Process and Methodology

Background & Objectives

- This CHNA is designed in accordance with CHNA requirements identified in the Patient Protection and Affordable Care Act and further addressed in the Internal Revenue Service final regulations released in December 29, 2014. The objectives of the CHNA are to:
 - Meet federal government and regulatory requirements
 - Research and report on the demographics and health status of the study area, including a review of state and local data
 - Gather input, data and opinions from persons who represent the broad interest of the community
 - Analyze the quantitative and qualitative data gathered and communicate results via a final comprehensive report on the needs of the communities served by BHSET
 - Document the progress of previous implementation plan activities
 - Prioritize the needs of the community served by the hospital
 - Create an implementation plan that addresses the prioritized needs for the hospital

Process and Methodology

Scope

- The CHNA components include:
 - A description of the process and methods used to conduct this CHNA, including a summary of data sources used in this report
 - A biography of BHSET
 - A description of the hospital's defined study area
 - Definition and analysis of the communities served, including demographic and health data analyses
 - Findings from phone interviews collecting input from community representatives, including:
 - State, local, tribal or regional governmental public health department (or equivalent department or agency) with knowledge, information or expertise relevant to the health needs of the community;
 - Members of a medically underserved, low-income or minority populations in the community, or individuals or organizations serving or representing the interests of such populations
 - Community leaders
 - A description of the progress and/or completion of community benefit activities documented in the previous implementation plan
 - The prioritized community needs and separate implementation plan, which intend to address the community needs identified
 - Documentation and rationalization of priorities not addressed by the implementation plan
 - A description of additional health services and resources available in the community
 - A list of information gaps that impact the hospital's ability to assess the health needs of the community served

Process and Methodology

Methodology

- BHSET worked with CHC in the development of its CHNA. BHSET provided essential data and resources necessary to initiate and complete the process, including the definition of the hospital's study area and the identification of key community stakeholders to be interviewed.
- CHC conducted the following research:
 - A demographic analysis of the study area, utilizing demographic data from Syntellis
 - A study of the most recent health data available
 - Conducted one-on-one phone interviews with individuals who have special knowledge of the communities, and analyzed results
 - Facilitated the review of collected data in October 2024 with the CHNA Team. The CHNA Team included:
 - Justin Doss, Chief Executive Officer
 - Bryan Chandler, Chief Operating Officer
 - Kathy Degenstein-Gartman, Chief Nursing Officer
 - Gary Troutman, Chief Financial Officer
 - William Toon, Chief IT Officer
 - Stephanie Harris, VP of Marketing & Communications
 - Hannah Schiesler, VP of Human Resources
 - Garret Craver, Administrator of Behavioral Health & Residency Programs
 - Payton Ferguson, Administrative Resident
- The methodology for each component of this study is summarized in the following section. In certain cases methodology is elaborated in the body of the report.

Process and Methodology

Methodology (continued)

– Baptist Hospitals of Southeast Texas Biography

- Background information about BHSET, mission, vision, values and services were provided by the hospital or taken from its website

– Study Area Definition

- The study area for BHSET is based on hospital inpatient discharge data from July 1, 2023 - June 30, 2024 and discussions with hospital staff

– Demographics of the Study Area

- Population demographics include population change by race, ethnicity, age, median household income analysis, unemployment and economic statistics in the study area
- Demographic data sources include, but are not limited to, Syntellis, the U.S. Census Bureau and the United States Bureau of Labor Statistics

– Health Data Collection Process

- A variety of sources (also listed in the reference section) were utilized in the health data collection process
- Health data sources include, but are not limited to, the Robert Wood Johnson Foundation, Texas Department of Health and Human Services, SparkMap, United States Census Bureau, and the Centers for Disease Control and Prevention

Process and Methodology

Methodology (continued)

– Interview Methodology

- BHSET provided CHC with a list of persons with special knowledge of public health in Jefferson and Orange Counties, including public health representatives and other individuals who focus specifically on underrepresented groups
- From that list, twenty-three in depth phone interviews were conducted using a structured interview guide
- Extensive notes were taken during each interview and then quantified based on responses, communities and populations (minority, elderly, un/underinsured, etc.) served, and priorities identified by respondents. Qualitative data from the interviews was also analyzed and reported.

– Evaluation of Hospital's Impact

- A description of the progress and/or completion of community benefit activities documented in the previous implementation plan
- BHSET provided CHC with a report of community benefit activity progress since the previous CHNA

– Prioritization Strategy

- Six significant needs were determined by assessing the prevalence of the issues identified in the health data findings, combined with the frequency and severity of mentions in the interviews
- Three factors were used to rank those needs during the prioritization process
- See the prioritization section for a more detailed description of the prioritization methodology

HOSPITAL BIOGRAPHY

Hospital Biography

About Baptist Hospitals of Southeast Texas

Performing Sacred Work by Delivering Quality Healthcare Solutions

The mission of Baptist Hospitals of Southeast Texas is and always has been dedicated to providing quality healthcare and sacred work in a Christian environment to all who need it. For over seventy-five years, our Partners in Caring — physicians, nurses, and staff — practice a philosophy that inspires an environment of teamwork, respect, encouragement, opportunity, and trust. Our efforts continue each day as we strive to offer newer and better programs, services, and technologies for the members of our community.

The dedicated staff at our Beaumont hospital provide their time and talents to performing life-changing education and community-focused programs and services meant to enable us to achieve our vision of improving the health of our community.

Our History

Established in 1949 when L.E. Stagg Sr. — a Beaumont businessman and Baptist leader — led the effort to build a “City of Healing” as a response to the serious hospital bed shortage in the Southeast Texas area. In keeping with the spirit of his membership in the Baptist General Convention of Texas, the Christian emphasis continues to be exemplified through the interrelationships of our organization’s management, 1500 employees, and the presence and participation of the chaplaincy in the healing process.

Having served Southeast Texas for more than 75 years, Baptist Hospitals of Southeast Texas has had the opportunity to touch, heal, and change many lives. With a long history of clinical excellence, high quality healthcare, cutting-edge technology, excellent customer service, and a mission and vision founded in faith, Baptist Hospitals is privileged to be entrusted with the health of our families, friends, and neighbors.

Hospital Biography

About Baptist Hospitals of Southeast Texas (cont'd)

Serving the Southeast Texas Community

Baptist Beaumont Hospital is located just off I-10 approximately 90 miles east of Houston, 60 miles from Galveston and 25 miles from the Louisiana border. This area of Southeast Texas is home to some of the world's largest refining and petrochemical centers, and has become a source of sophisticated medical technology, precision industrial equipment, large and small business, and higher education facilities that appreciate the low cost of living and the skilled workforce.

As the population changes, healthcare must adapt to the needs of the community. Caring for generations — from pediatrics to geriatrics — requires constant adaptation to meet the needs of the population. Baptist Hospitals of Southeast Texas provides abundant resources for outpatient services, inpatient services, high definition imaging, and emergency medical care 24/7 for all those needing services.

Specialized Services to Deliver Better Care

Baptist Hospitals of Southeast Texas hosts the only Behavioral Health Inpatient facility in Southeast Texas, a strong emphasis has been placed on serving patients struggling with mental and/or addiction disorders. New programs have been designed to support those in need of intensive outpatient therapy, group therapy, and crisis stabilization for all generations.

As the need for cancer services continued to increase in our regional area as well, Baptist Hospitals of Southeast Texas Partnered with the Cancer Center of Southeast Texas and Altus Cancer Center to create the Baptist Hospitals of Southeast Texas Cancer Network. This consolidation of specialized radiation therapy, hematology and medical oncology serves to expand and enhance regional cancer care in Southeast Texas.

Hospital Biography

About Baptist Hospitals of Southeast Texas (cont'd)

Specialized Services to Deliver Better Care (cont'd)

This partnership, combined with the recent Comprehensive Accreditation through the Commission on Cancer for the Baptist Cancer Center demonstrates the commitment to providing safe, efficient, and high-quality cancer services in a loving environment to members of the community.

Care for the Whole Family

With the only pediatric emergency room in Southeast Texas, the Children's Emergency Center boasts five treatment rooms in a designated child-friendly area. The pediatric emergency unit is open 24 hours a day/7 days a week, staffed with nurses who have special pediatric emergency training.

As part of the commitment to the members of our community, Baptist Hospitals of Southeast Texas partnered with the Beaumont Foundation and the Reaud Foundation to open the Albert E. and Gena Reaud Guest House to provide lodging for members of our community and surrounding areas receiving medical treatment.

Hospital Biography

Mission, Vision and Values

Mission

Together, we perform Sacred Work by uniting Kindness, Quality and Healing...ALWAYS.

Vision

Baptist Hospitals of Southeast Texas will be the premier healthcare system by creating the best possible outcomes with exceptional patient care experiences. We will accomplish this by keeping quality (best clinical outcomes, excellent customer service and a reasonable or commensurate price) at the core of everything we do.

Values

- We are committed to assisting and meeting the health care needs of the individuals in our diverse communities
- We are stewards of community resources and are committed to being medically, socially, financially, legally, and environmentally responsible
- We are devoted to providing superior quality, cost-efficient, innovative, and compassionate care
- We collaborate with our patients, families, physicians, employees, volunteers, vendors, and communities to achieve our purpose
- We support teaching programs that develop the health care professionals of tomorrow
- We support education and implementation of innovative technology to expand our knowledge and learn how to provide better care
- We provide holistic health care which addresses with dignity the physical, social, psychological, and spiritual needs of individuals
- We are committed to the growth and development of the intellectual and spiritual capabilities of our employees
- We have high ethical standards and expect integrity, fairness, and respect in all our relationships
- We recognize that effective, quality healthcare encourages and supports an environment focused on safe practices

Housing Costs Exceeds 30% of Income Definition: The percentage of the households where housing costs are 30% or more of total household income.

Substandard Conditions Definition: The number and percentage of owner- and renter-occupied housing units having at least one of the following conditions: 1) lacking complete plumbing facilities, 2) lacking complete kitchen facilities, 3) with 1 or more occupants per room, 4) selected monthly owner costs as a percentage of household income greater than 30%, and 5) gross rent as a percentage of household income greater than 30%.

HEALTH DATA OVERVIEW

Data Methodology

- **The following information outlines specific health data:**
 - Mortality, chronic diseases and conditions, health behaviors, natality, mental health and health care access
- **Data Sources include, but are not limited to:**
 - Texas Department of State Health Services
 - Texas Cancer Registry
 - Small Area Health Insurance Estimates (SAHIE)
 - SparkMap
 - The Behavioral Risk Factor Surveillance System (BRFSS)
 - The Behavioral Risk Factor Surveillance System (BRFSS) is the world's largest, on-going telephone health survey system, tracking health conditions and risk behaviors in the United States yearly since 1984. Currently, information is collected monthly in all 50 states, the District of Columbia, Puerto Rico, the U.S. Virgin Islands, and Guam.
 - It is a state-based system of health surveys that collects information on health risk behaviors, preventive health practices, and health care access primarily related to chronic disease and injury. For many states, the BRFSS is the only available source of timely, accurate data on health-related behaviors.
 - States use BRFSS data to identify emerging health problems, establish and track health objectives, and develop and evaluate public health policies and programs. Many states also use BRFSS data to support health-related legislative efforts.
 - The Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute
 - United States Census Bureau
- **Data Levels:** Nationwide, state, and county level data

Health Status

County Health Rankings & Roadmaps – Health Outcomes

Jefferson County Health Outcomes

Orange County Health Outcomes

- According to County Health Rankings & Roadmap, Health Outcomes tell us how long people live on average within a community, and how much physical and mental health people experience in a community while they are alive.
- Many indicators go into the overall health outcomes and some examples of where both Jefferson and Orange Counties were worse than the state for health outcomes include:
 - Length Of Life:
 - Premature Death
 - Quality Of Life:
 - Poor Physical Health Days
 - Poor Mental Health Days
 - Low Birthweight

Health Status

County Health Rankings & Roadmaps – Health Factors

Jefferson County Health Factors

Orange County Health Factors

- According to County Health Rankings & Roadmap, many things influence how well and how long we live. Health Factors represent those things we can improve to live longer and healthier lives. They are indicators of the future health of our communities.
- Many indicators go into the overall health factors and some examples of where both Jefferson & Orange Counties were worse than the state for health factors include:
 - Health Behaviors:
 - Adult Obesity
 - Clinical Care:
 - Primary Care Physicians
 - Social and Economic Factors:
 - Unemployment
 - Physical Environment:
 - Driving Alone to Work

Source: The Annie E. Casey Foundation, Kids Count Data Center, filtered for Jefferson & Orange Counties, TX, <https://datacenter.aecf.org/>; data accessed July 30, 2024.

Note: Percentages are crude rates based on number of specific indicator-related cases divided by total births. Rates are not calculated if number of cases are too low for statistical reliability. Birth data are reported by mothers' county of residence (as mothers reported on birth certificates during the birth registration) regardless where deliveries actually occurred, in state or out-of-state.

Teen Birth Definition: live births to women younger than 19 years old.

Prenatal Care Definition: the number and percent of births to women who received no prenatal care, or care after the first trimester.

Preterm Births Definition: the number of babies born before 37 weeks gestation and that number as a percentage of all live births.

Low Birth-Weight Births Definition: live births with birthweight less than 2,500 grams.

Health Status

Mental Health - Depressive Disorders

- Between 2020 and 2022, the percent of adults (age 18+) with depression increased in both Jefferson and Orange Counties and the state.
- Orange County (26.2%) had a higher percent of adults (age 18+) with depression than Jefferson County (21.8%) and the state (19.4%) (2022).
- Between 2020 and 2022, the percent of adults (age 18+) who self-reported that their mental health was not good for 14+ days increased in both Jefferson and Orange Counties and the state.
- In 2022, the percent of adults (age 18+) who self-reported that their mental health was not good for 14+ days in Orange County (19.7%) was higher than Jefferson County (19.2%) and the state (16.2%).

Source: Center for Disease Control and Prevention, Chronic Disease Indicators, filtered for Texas; <https://www.cdc.gov/cdi/>, data accessed September 19, 2024.

Depression Definition: Adults who responded yes to having ever been told by a doctor, nurse, or other health professional they had a depressive disorder, including depression, major depression, dysthymia, or minor depression.

Frequent Mental Distress Definition: Adults aged ≥ 18 years who report that their mental health (including stress, depression, and problems with emotions) was not good for 14 or more days during the past 30 days.

Health Status

Screenings – Mammography & Prostate Screening (Medicare)

- Between 2020 and 2022, the percent of females (age 35+) that received at least one mammography screening in the past year increased in both Jefferson and Orange Counties and the state.
- In 2022, the percent of females (age 35+) that received at least one mammography screening in the past year in Jefferson County (33.0%) was higher than Orange County (29.0%) and the state (32.0%).
- Between 2020 and 2022, the percent of males (age 50+) that received at least one prostate screening in the past year increased in both Jefferson and Orange Counties and the state.
- In 2022, the percent of males (age 50+) that received at least one prostate screening in the past year in both Jefferson and Orange County was consistent (21.0%) and was higher than the state (19.0%).

**Mammography Screening, Percentage,
Medicare, Females (age 35+), 2020-2022**

**Prostate Cancer Screening, Percentage,
Medicare, Males (age 50+), 2020-2022**

Source: Centers for Medicare & Medicaid Services, Office of Minority Health, Mapping Medicare Disparities, <https://data.cms.gov/mapping-medicare-disparities>; data accessed on July 30, 2024.

Mammography Screening Definition: percentages are identified using the HCPCS/CPT codes present in the Medicare administrative claims. The uptake rate for mammography services is calculated as the percentage of beneficiaries that received at least one of the services (defined by HCPCS/CPT codes) in a given year. Number of beneficiaries for mammography services excludes: beneficiaries without Part B enrollment for at least one month; beneficiaries with enrollment in Medicare Advantage; male beneficiaries; and female beneficiaries aged less than 35.

Prostate Cancer Screening Definition: percentages are identified using the HCPCS/CPT codes present in the Medicare administrative claims. The uptake rate for prostate cancer services is calculated as the percentage of beneficiaries that received at least one of the services (defined by HCPCS/CPT codes) in a given year. Number of beneficiaries for prostate cancer screening services excludes: beneficiaries without Part B enrollment for at least one month; beneficiaries with enrollment in Medicare Advantage; female beneficiaries; and male beneficiaries aged less than 50.

Health Status

Screenings – Influenza & Pneumococcal Vaccination (Medicare)

- Between 2020 and 2022, the percent of Medicare beneficiaries that received a flu shot in the past year in both Jefferson and Orange Counties and the state decreased.
- In 2022, Jefferson County (43.0%) had a higher percent of Medicare beneficiaries that received a flu shot in the past year than Orange County (42.0%) but a lower percent than the state (45.0%).
- Between 2020 and 2022, the percent of Medicare beneficiaries that ever received a pneumonia shot in both Jefferson and Orange Counties and the state decreased.
- In 2022, Jefferson County (8.0%) had a higher percent of Medicare beneficiaries that ever received a pneumonia shot than Orange County (6.0%) and a comparable percent to the state (8.0%).

**Influenza Virus Vaccine, Percentage, Medicare,
2020-2022**

Medicare, 2020-2022**

Source: Centers for Medicare & Medicaid Services, Office of Minority Health, Mapping Medicare Disparities, <https://data.cms.gov/mapping-medicare-disparities>; data accessed on September 23, 2024.

Influenza Virus Vaccine Definition: Received an influenza vaccination in the past year.

Pneumococcal Vaccine Definition: Received a pneumococcal vaccination (PPV) ever.

Health Status

Health Care Access - Uninsured

- Orange County and the state experienced a decrease in the percent of uninsured adults (age 18-64) between 2018 and 2022 while Jefferson County's percent fluctuated.
- As of 2022, Jefferson County (20.5%) had a higher percent of uninsured adults (age 18-64) as compared to Orange County (14.6%) and the state (18.8%).

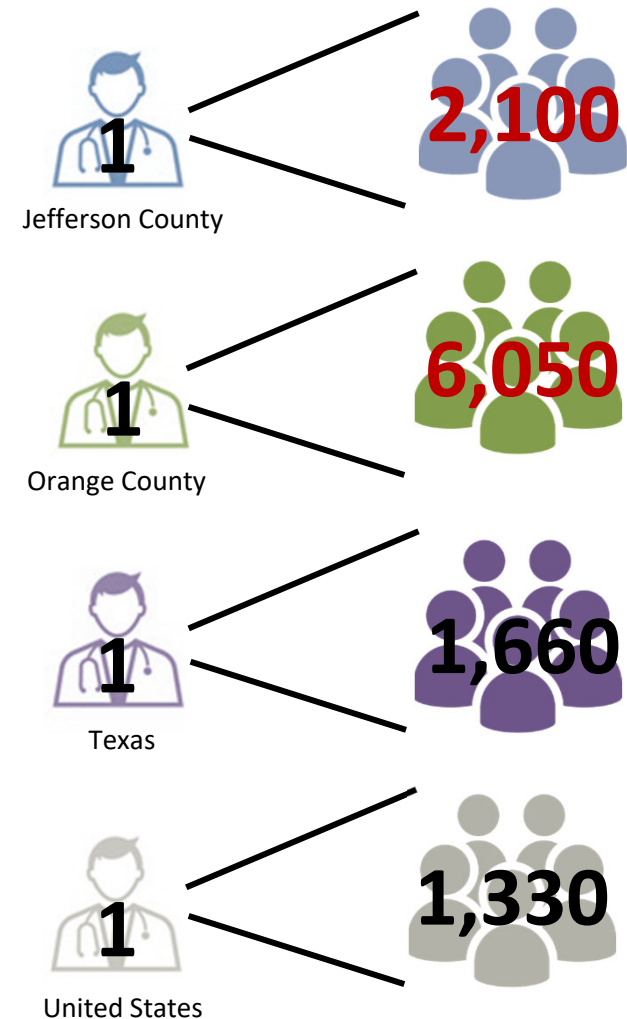

Uninsured, Percent of Adults (Age 18-64), 2018-2022

Health Status

Health Care Access – Primary Care Physicians

- **Sufficient availability of primary care physicians is essential for preventive and primary care.**
 - In 2021, the population to primary care physician ratio in Orange County (6,050:1) was the highest as compared to Jefferson County (2,100:1), the state (1,660:1) and the nation (1,330:1).

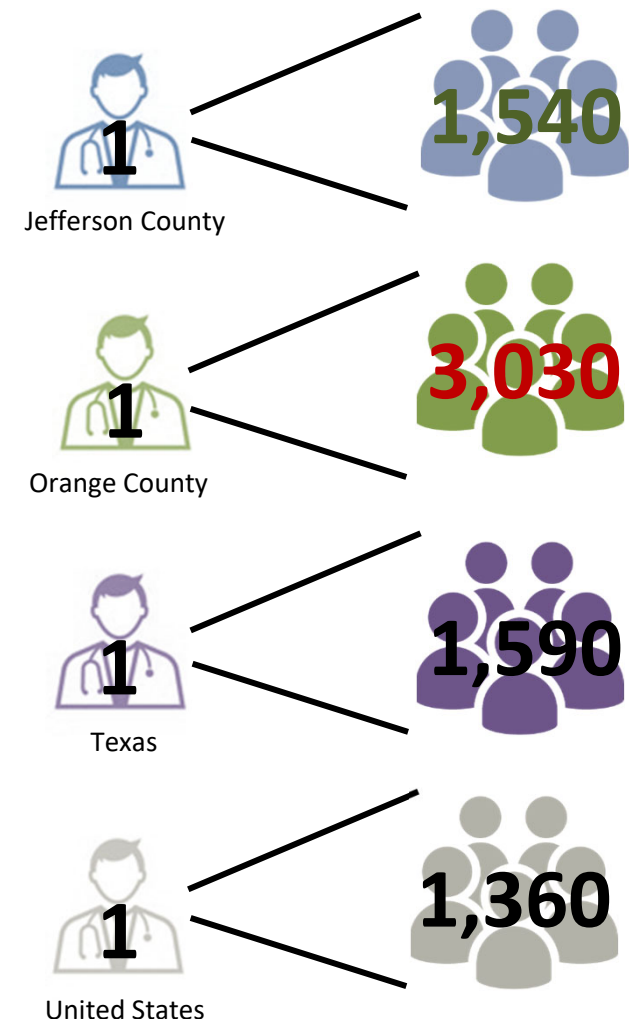

Source: County Health Rankings & Roadmaps, Health Indicator Report: filtered for Jefferson and Orange Counties, TX, <https://www.countyhealthrankings.org/>; data accessed July 29, 2024.

Definition: The ratio represents the number of individuals served by one physician in a county, if the population was equally distributed across physicians. "Primary care physicians" classified by the AMA include: General Family Medicine MDs and DOs, General Practice MDs and DOs, General Internal Medicine MDs and General Pediatrics MDs. Physicians age 75 and over and physicians practicing sub-specialties within the listed specialties are excluded.

Health Status

Health Care Access – Dental Care Providers

- **Lack of sufficient dental providers is a barrier to accessing oral health care. Untreated dental disease can lead to serious health effects including pain, infection, and tooth loss.**
 - In 2022, the population to dental provider ratio in Orange County (3,030:1) was the highest as compared to Jefferson County (1,540:1), the state (1,590:1) and the nation (1,360:1).

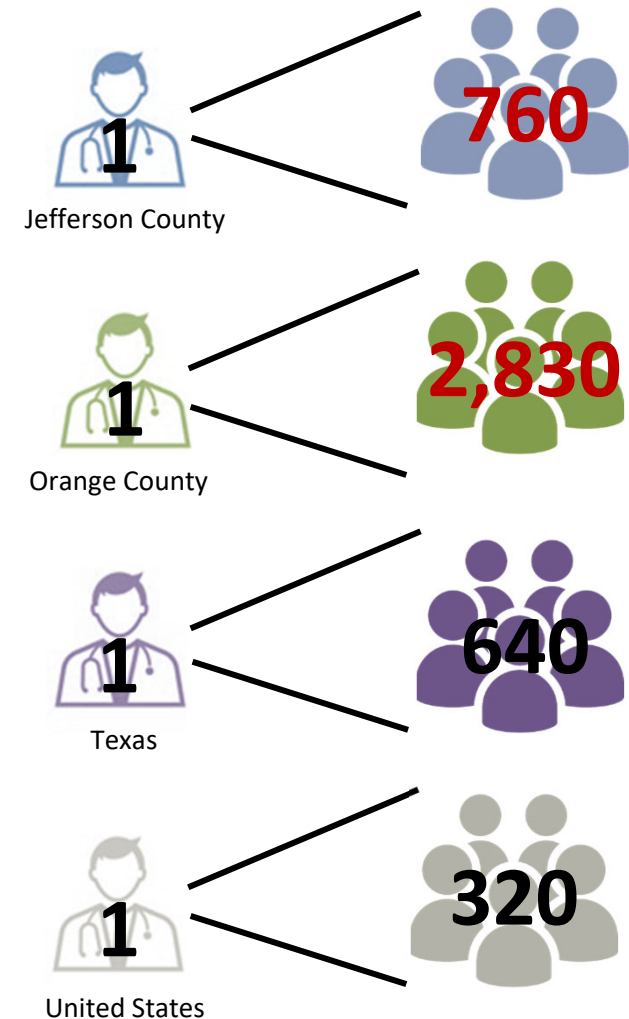

Source: County Health Rankings & Roadmaps, Health Indicator Report: filtered for Jefferson and Orange Counties, TX, <https://www.countyhealthrankings.org/>; data accessed July 29, 2024.

Definition: The ratio represents the population served by one dentist if the entire population of a county was distributed equally across all practicing dentists. All dentists qualified as having a doctorate in dental surgery (D.D.S.) or dental medicine (D.M.D.) licensed by the state to practice dentistry and who practice within the scope of that license.

Health Status

Health Care Access – Mental Health Care Providers

- **Lack of access to mental health care providers not only effects overall individual wellness but also impacts the health of a community.**
 - In 2023, the population to mental health provider ratio in Orange County (2,830:1) was the highest as compared to Jefferson County (760:1), the state (640:1) and the nation (320:1).

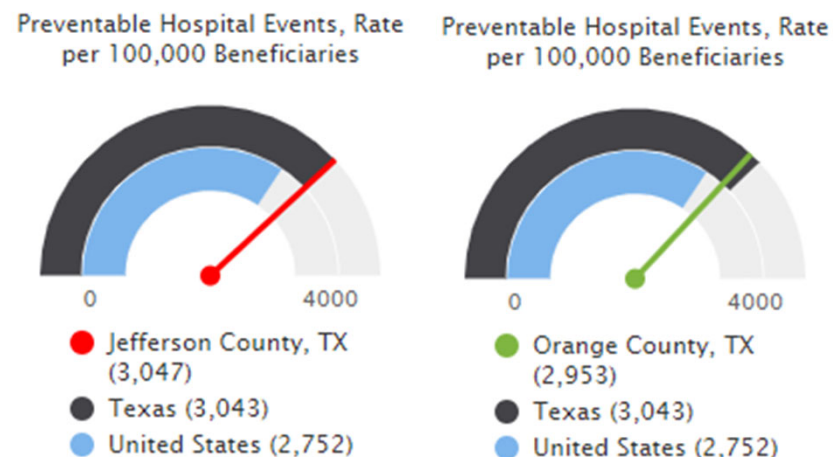

Source: County Health Rankings & Roadmaps, Health Indicator Report: filtered for Jefferson and Orange Counties, TX, <https://www.countyhealthrankings.org/>; data accessed July 29, 2024.
Definition: The ratio represents the number of individuals served by one mental health provider in a county, if the population were equally distributed across providers. Psychiatrists, psychologists, clinical social workers, and counselors that specialize in mental health care.

Health Status

Health Care Access – Preventable Hospital Events

- **Lack of adequate and available primary care resources for patients to access may lead to increased preventable hospitalizations.**
 - In 2021, the rate of preventable hospital events in Jefferson County (3,047 per 100,000 Medicare beneficiaries) was the highest as compared to Orange County (2,953 per 100,000 Medicare beneficiaries), the state (3,043 per 100,000 Medicare Enrollees) and the nation (2,752 per 100,000 Medicare beneficiaries).

Note: a green dial indicates that the county has a better rate than the state, and a red dial indicates that the county has a worse rate than the state.

Source: SparkMap, Health Indicator Report: logged in and filtered for Jefferson and Orange Counties, TX, <https://sparkmap.org/report/>; data accessed July 29, 2024.

Definition: Ambulatory Care Sensitive (ACS) conditions include pneumonia, dehydration, asthma, diabetes, and other conditions which could have been prevented if adequate primary care resources were available and accessed by those patients.

Health Status

Health Care Access – Transportation

- **Lack of transportation is frequently noted as a potential barrier to accessing and receiving care.**
 - Between 2018 and 2022, Jefferson County (7.4%) had a higher percent of households that had no motor vehicles as compared to Orange County (5.3%) and the state (5.3%), but a lower percent when compared to the nation (8.3%).

Note: a green dial indicates that the county has a better rate than the state, and a red dial indicates that the county has a worse rate than the state.

PHONE INTERVIEW FINDINGS

Overview

- Conducted 23 interviews with the two groups outlined in the IRS final regulations
 - CHC contacted other individuals in the community to participate in the interview process, but some were unable to complete an interview due to a variety of reasons
- Discussed the health needs of the community, access issues, barriers and issues related to specific populations
- Gathered background information on each interviewee

Methodology

- Individuals interviewed for the CHNA were identified by the hospital and are known to be supportive of ensuring community needs are met. CHC did not verify any comments or depictions made by any individuals interviewed. Interviewees expressed their perception of the health of the community based on their professional and/or personal experiences, as well as the experiences of others around them. It is important to note that individual perceptions may highlight opportunities to increase awareness of local resources available in the community.
- This analysis is developed from interview notes, and the CHC team attempted to identify and address themes from these interviews and share them within this report. None of the comments within this analysis represent any opinion of CHC or the CHC professionals associated with this engagement. Some information may be paraphrased comments. The comments included within the analysis are considered to have been common themes from interviews defined as our interpretation of having the same or close meaning as other interviewees.

Interviewee Information

- **Pastor John Adolph:** Pastor, Antioch Baptist Church; Board Member, Baptist Hospitals of Southeast Texas
- **Virtue Alexander:** Grant Writer/Manager, Communities in Schools of Southeast Texas
- **Jennifer Blankenship:** Director, Orange County Health Department
- **Holly Borel:** Chief Executive Officer, Spindletop
- **Shanna Briggs:** Regional Manager, Alzheimer's Association
- **Bonnie Brooks:** Community Services Outreach Coordinator, Southeast Texas Regional Planning
- **Kathy Chessher:** Sr. Community Development Manager, American Cancer Society
- **Kenneth Coleman:** Executive Director, Beaumont Public Health Department
- **Garrett Craver:** Administrator of Behavioral Health & Residency Programs, Baptist Hospitals of Southeast Texas
- **Joshua Davis:** Vice President of Development (East Region), Legacy Community Health
- **Jeff Dyson:** Director MBA and Graduate Certificate Programs and Instructor of Management, Lamar University; Board Member, Baptist Hospitals of Southeast Texas
- **Carol Fernandez:** Executive Director, Catholic Charities of Southeast Texas
- **Stephanie Garsea:** Community Relations, Acadian Ambulance
- **Karyn Husbands:** Executive Director, United Way of Jefferson County
- **Janci Kimball:** President/Chief Executive Officer, Nutrition & Services for Seniors
- **Megan Layne:** Executive Director, Orange County Economic Development
- **GiGi Mazzola:** Executive Director, Cardiovascular Foundation of Southeast Texas
- **Amber Meredith:** Immunizations Clinical Manager, Hardin County Health Department
- **Michael Perez:** President, Rotary Club of Beaumont
- **Yuri Sanchez:** Program Coordinator HIV Screening, Baptist Hospitals of Southeast Texas
- **Kayla White:** Executive Director, Southeast Texas Nonprofit
- **Byron Young:** Director of the SmartHealth Clinic, Baptist Hospitals of Southeast Texas
- **Harvey Zernial:** Executive Director, Southeast Texas Food Bank

Interviewee Characteristics

- Work for a State, local, tribal, or regional governmental public health department (or equivalent department or agency) with knowledge, information, or expertise relevant to the health needs of the community

13.0%

- Member of a medically underserved, low-income, and minority populations in the community, or individuals or organizations serving or representing the interests of such populations

78.3%

- Community leaders

8.7%

Note: Interviewees may provide information for several required groups.

Community Needs Summary

- Interviewees discussed the following as the most significant health issues:
 - Environment & Infrastructure Concerns
 - Programs Promoting Healthy Lifestyles
 - Access to Mental & Behavioral Healthcare
 - Barriers to Care
 - Community Education on Seeking Appropriate Care
 - Cost Care & Patient Transitions
 - Access to Specialty Care
 - Elderly Population
 - Youth Population
 - Access to Dental Care

Environment & Infrastructure Concerns

- **Issues/Themes:**

- Transportation barriers hindering access to care for specific groups:
 - Individuals living in outlying areas
 - Low income/working poor
- Acknowledgement that telemedicine has improved access for some, but rural areas still lack accessibility
- Concern about local affordable housing and the impact of disasters on available housing options
- Perceived poor quality school system leading to difficulties recruiting providers to the area
- Desire for a comprehensive healthcare facility in Orange County
- Awareness of high levels of food insecurity
- Limited local grocery stores leading to poor nutrition and a range of health problems
- Perceived opportunity for enhanced collaboration among organizations
- Need for additional green spaces and wellness programs to help:
 - Promote healthy lifestyle choices
 - Improve quality of life
- Desire to see a YMCA come into Beaumont

“Transportation and the lack of co-located providers are significant problems. Your primary care provider may be here, but you might have to travel somewhere else for a specialist or a procedure. For some of our outlying counties, it’s harder.”

“Transportation is a challenge. Many cannot afford an Uber or Lyft, and the public transportation system is limited in both reach and availability.”

“In general, rural accessibility to physicians or nurse practitioners is a significant concern. We’ve seen some improvement with telehealth, but there are still some rural pockets that lack accessibility—like Fannett.”

“Housing is of concern. We’ve had a lot of disasters that impacted housing in our region. It’s devastated homes to the point they are unlivable. Housing here is not affordable.”

“I would focus on engaging providers to stay here and improving the local infrastructure and schools. That is a major draw for families wanting to raise children. A lot of times we get people here to talk to them but Beaumont is not really pretty on the outside. We have a poorly-rated school district. I think we have trouble getting people in the door.”

“In Orange County, there’s no surgery happening here. If someone is facing a life-threatening situation or even routine surgery, they must go to Beaumont or Houston. We need a hospital to meet the needs of the community.”

“Health concerns related to food insecurity are critical. When families don’t have access to food, it leads to other problems. A grocery store in Vidor, TX is closing, and there’s another in the south end of Beaumont that is also closing. Not having a grocery store close by is definitely a struggle, leading to issues with diabetes, hypertension, and other chronic diseases that can be impacted by poor health decisions and options.”

“We should be putting in some green spaces and have community wide wellness initiatives. More collaboration among healthcare entities in the area is essential. It’s not just about the money; it’s about working together to identify solutions.”

“Quality of life is at the top of my list. That includes providing amenities that encourage people to get outside. Building healthier lifestyles through parks, trees, walking paths, bike paths, and wide open spaces where people can safely play. We used to have a YMCA. A facility like that would allow families to gather and make it affordable for them to participate in different programs, like learning to swim.”

Programs Promoting Healthy Lifestyles

- **Issues/Themes:**

- Appreciation for local programs and resources in the community including but not limited to:
 - Preventative screenings
 - Local food bank
 - Parks/walking trails
 - BHSET hosted events
- Need for more community engagement and marketing of local resources
 - Challenge in reaching vulnerable populations
 - Lack of awareness of existing programs and resources
- Desire for more options/resources for those who are lower-income
- Need for better access to healthy food options and education about nutrition
- Chronic conditions and risky behaviors such as:
 - Cancer
 - Diabetes
 - Hypertension
 - Substance abuse
 - Increased syphilis rates
- Desire for increased community education surrounding healthy lifestyle behaviors

“Prevention is always the hardest part. We do have a lot of programs focused on breast and prostate health. We have a local food bank here. There are some parks and walking trails. Compared to a lot of cities, we are in pretty good shape.”

“We have some pretty good programs that promote health, but there’s a huge lack of awareness among the community. For the average citizen who works 9 to 5 and has kids, I don’t think they are aware of some of the programs that are here. We could do better to make people more aware of them.”

“There’s a lot going on that’s not hitting everyone. They’re trying to find ways to reach the homebound folks or the people who are really having issues. The hospital is doing a good job in hosting events, but there’s a challenge in reaching the most vulnerable.”

“For our area, we have a substantial amount of resources available for health and fitness. You can’t make anybody take advantage of them. There are people in the fitness community who say our community doesn’t do enough. If you’ve lived in other cities, this city has average, if not above-average, resources for its size.”

“You don’t see many people doing outdoor activities. There aren’t a lot of communities that have sidewalks. I don’t see much healthy eating or marketing around our food banks and I know they are active here.”

“I wish there were more cost-effective options for the lower-income. We have a bunch of gyms in the area but some won’t be able to afford the membership.”

“There are a lot of studies regarding food deserts in our area and several initiatives to address that. Access around healthy eating and being intentional about it is essential.”

“A lot of areas are affected by the refineries. The cancer rate is high and the diabetes rate is elevated due to diet. Diabetes is a huge issue, along with uncontrolled hypertension and substance abuse.”

“We are seeing a larger number of syphilis infections in the area, which is a concern.”

“Having more community outreach and education on preventable issues, like healthier lifestyles, is crucial. Diabetic patients often don’t eat right, don’t take their meds, and don’t see doctors regularly. If we had more education that goes out into the field, it could make a difference.”

Access to Mental & Behavioral Healthcare

- **Issues/Themes:**

- Underserved population experiencing difficulties accessing mental and behavioral health resources
- Excitement for the expansion of the BHSET mental and behavioral health facility and psychiatry residency program
- Conflicting comments about accessibility to see a mental and behavioral healthcare provider
- Desire for more education about local, available programs to improve mental and behavioral health access
- Potentially worsening mental health conditions due to long wait times
- Need for additional mental and behavioral health providers accepting insurance
- Appreciation for telehealth options for mental health

“It’s easy to get in to see a therapist. It’s fairly easy to see a psychiatrist. In terms of the underserved population (low income, homeless, etc.), we have a strong sector of the community with mental health issues. They are plaguing law enforcement and the jail system. There is some available inpatient care, but it is not nearly adequate. However, we are excited about the expansion of the mental health facility at Baptist. I know law enforcement is excited about it.”

“The minimum wait for someone with good insurance is no less than six months. You cannot have a mental health crisis and expect to get help. That would have to be managed in an acute setting, which we do have. Baptist Hospital is the only inpatient behavioral health center in our community. The only other one closed down a couple of years ago in Port Arthur. Baptist has recently started a psychiatry residency program and hopes to retain some of them in the community.”

“We have the Spindletop Center here that provides free access to mental health services. We also have Catholic Charities, which provides counseling at a sliding scale rate. Other than that, there’s not a lot of services. We have a lot of patients who have complaints or issues with mental health.”

“There are several programs but there could be more of a push to educate people about these programs and clinics that are specifically there for mental health. The accessibility is there, we just need to raise more awareness that they exist.”

“It’s more difficult than it should be. People don’t know how to access the provider in a timely manner. You may set up an appointment four weeks after something comes up, but in four weeks, things can go downhill pretty fast. We don’t have enough mental health services or training in the area for mental health issues.”

“There’s a lot of people in the community who have insurance looking for psychiatric care. There are not a lot of providers for private pay. A few take cash payments but don’t take insurance because they don’t want to deal with the hassle. That’s difficult for the people who need the care and pay cash.”

“I love telehealth, including for mental health. I use it especially for therapy.”

Barriers to Care

Community Education on Seeking Appropriate Care

- **Issues/Themes:**

- Need for additional education on healthcare options
- Difficulty educating the community due to lack of unified way to reach patients
- Perceived delaying or foregoing care due to lack of knowledge about healthcare
- Lack of understanding next health steps/seeking follow up care leading to patient readmissions
- Knowledge deficits of available services leading to use of the ER, particularly for the low income, uninsured populations
- Confusion about the appropriate healthcare facility to use based on patient's symptoms leading to:
 - Overuse of the ER
 - Using EMS for non-emergent situations
- Need for education on insurance implications of selecting one type of facility over another for emergency care

"Most people don't pay attention to what is available until they need the service. We have 211 but we need more specific resources."

"Communication is key. We have people willing to teach these individuals, but we don't have a way to effectively reach them because there isn't a single source where they get their information. It's hard to get a good turnout. There are several pockets in the county that don't have internet access."

"There are access barriers to care for people who want care as well as for those who don't access care because they don't know. Some people are hesitant to go to the doctor because they don't know what they don't know."

"The back of the discharge papers has information. But does the patient read it and comprehend it? They aren't going to look at that. Finding a way to close the loop on that is important. A lot of times, the patient will be back in 90 days."

"When I contact patients to see if they have followed up with any providers, they say they haven't, so they continue to come back with the same complaint."

"There is a knowledge deficit in truly knowing how to access services and what services to access. The well-insured population doesn't seem to access the ER or other parts of the hospital for their primary care needs. But that's not the same for Medicaid and uninsured populations; sometimes they don't have a choice."

"You have the hospital ER, freestanding ERs, 'doc-in-a-box' and urgent cares. How do people know where to go? Which one is really the appropriate option when you don't have a primary care provider? I think some people know, and others will just go to the ER thinking it's urgent care. I do think this is very confusing."

"A lot of people don't know what an emergency is and what is not. They are scared, but once EMS gets there and triages and makes the assessment, then they don't want to go. Some need to go and refuse, while others demand to go but don't really need emergency care."

"There might need to be a heightened awareness of when to go to the private ER versus the hospital ER. There is some misunderstanding about insurance and what they cover at hospital ERs vs freestanding ERs. There could probably be some public service announcements that could run to build awareness."

Barriers to Care

Cost of Care & Patient Transitions

- **Issues/Themes:**

- Struggle between paying for medication vs. essential expenses, particularly for uninsured
- Limited health options leading to ER and/or urgent care use which results in expensive bills
- Perceived overprescribing of medications for conditions leading to increased costs and use of insurance
- Lack of local long term care facilities leading to challenges, including:
 - Transportation barriers
 - Proximity to family
 - Foregoing care
- Desire for more collaborative support during patient transitions from one health setting to the next

"People are unable to afford their medication. It has to do with cost, especially for those without insurance. 'Do I pay for my medicine or my electricity?' Many people are walking around with hypertension but have no means of obtaining blood pressure medication."

"When someone wants to see a doctor, they go to the ER. But going to the ER can result in thousands of dollars in bills."

"Some clinics only accept insurance which forces some indigent people to the ER."

"There are urgent care clinics but they may require cash payment if someone is uninsured and that can be an issue."

"We have a lack of internal medicine providers. [Seeing a] pediatrician is hard. We have a couple of Federally Qualified Health Centers (FQHC) that help, but I still think there's a shortage [of providers]. We have an internal medicine clinic and it's always full."

"Healthcare is expensive partly because we medicate a large percentage of problems that don't require medication. This makes care more expensive and necessitates insurance."

"We don't have any long-term care facilities or in-between options where they need to go for a few weeks to a month, like for a PICC line. They don't have transportation, so they stay in mid-county, which is an hour's drive. If they had a little bit of family support, that would help, but there just aren't those types of facilities. They go home, don't recover, and it's just a cycle. They come back to the hospital."

"There are challenges in the transitional phase. Is the initial entity following through to conclusion, or are they saying it's your responsibility now? It needs to be more collaborative and follow that patient, whether that's verbal or otherwise. Transitioning to physical therapy from heart surgery was challenging. Even though it was in the same building, it felt like we were dealing with two separate businesses."

"Perhaps we could streamline communication from one physician to another. If you have a heart condition, it would be helpful for your primary care physician to receive that information directly. Maybe just more cohesiveness of the doctors working together to help you. [Having] more of a team mindset when addressing the health of the patient."

"Healthcare navigation needs to be a priority. It would be nice if you were somewhere dealing with a sudden issue, to know or know how to access someplace where you can connect to the care or providers you need."

Access to Specialty Care

- **Issues/Themes:**

- Appreciation for the hospital's use of telemedicine for specialty care appointments
- Conflicting comments on wait times for specialty care services
- Need for pediatric subspecialties
- Patient preferences to see a physician vs. an advanced practitioner
- Appreciation for the local cancer center
- High turnover of OB/GYN providers leading to limited available services
- Limited accessibility to local specialty care services leading to outmigration (Houston, Lake Charles)
- Challenges in seeing certain specialty care providers, particularly for the Medicaid population
- Specialties mentioned as needed due to long wait times or lack of coverage, include (in descending order of number of times mentioned and then alpha order):
 - Neurology (general and pediatric)
 - Gastroenterology
 - Mental health
 - OB/GYN
 - Cardiology
 - Dermatology
 - Endocrinology
 - Oncology
 - Orthopedics
 - Pulmonology

"I would say specialty care has a wait time of 2 to 3 weeks to see a specialist, and some do travel into the Beaumont area from the Houston market. Some specialists are backlogged, and there are some who have wait times of 5 months or longer, depending on the specialty. Baptist has done such a great job with telemedicine, which I think is super helpful."

"Conservatively, it's a couple of months to see a specialist but sometimes it could be even longer. We have a lot of pediatricians, but in terms of specialists, there does seem to be a gap."

"I think accessibility is okay, but that definitely depends on the size of the practice and how busy they are. With specialists, I know a lot of patients don't like seeing mid-level providers. I've heard people are very happy with our cancer center we have in Beaumont. I've come across people who decide to stay here for their cancer treatment instead of going to Houston, which speaks volumes."

"There seems to be a lot of turnover with local facilities and practitioners for women's health. In Orange, it really just provides screenings, ultrasounds, and preventative scans, like mammograms. There is nothing in Orange County, so people go to Jefferson County or some folks go to Lake Charles for that type of service."

"Access to specialty care is a concern in Orange County. I would say this applies to Jefferson as well. A lot of times, when someone needs that care, they have to travel to Houston for certain specialties, such as neurology and cardiovascular care."

"The outmigration of the insured population to Houston really affects care in the Southeast."

"Getting in to see a specialist in general is very simple for those with insurance. There are some specialties that we are severely lacking in our community like psychiatry or behavioral health. Most specialists do not accept Medicaid at all, traditional or managed care, with the exception of a couple of cardiologists in town who only see a limited number of Medicaid patients."

Elderly Population

- **Issues/Themes:**

- Acknowledgement of food insecurity for the elderly population, specifically for those that are homebound
- Difficulty navigating Medicare options
- Limited facilities and services for Alzheimer's and dementia care
- Need for additional education and assistance with local resources
- Transportation barriers and limited housing options for the elderly
- Low income seniors facing greater challenge in affording medications and health care services
- Outmigration to Houston for specialty care
- Limited support systems for the elderly leading to isolation
- Desire to be seen by a physician vs. an advanced practitioner
- Need for enhanced coordination and communication amongst providers for patient care
- Closing of local pharmacy cause issues accessing medication

“Food insecurity is a huge issue, especially among the homebound population. Programs like Meals on Wheels and transportation services are essential. It's really important that we have the funding and ability to serve seniors.”

“Navigating Medicare options is hard for the elderly to do. It's hard to find the right plan that fits you. For Alzheimer's and dementia care, there are very few people who specialize in that. There aren't great memory care units. They exist in assisted living facilities, not nursing homes.”

“Many seniors need an explanation of 211 services at the state level. A lot of times, extra help is needed. You have a lot of seniors who cannot navigate the system by themselves.”

“The city of Beaumont has the Beaumont Municipal Transit. It's not a 24-hour service. For the elderly, it's challenging to get to the bus stop. Housing is a concern. There's just not a lot of housing available to meet their income.”

“A lot of the Medicare-eligible people are also low-income, so they're having a hard time paying copays or utility bills. Maybe adherence to their medication has everything to do with their financial situation and not them wanting to take it.”

“Most of the elderly go to Houston to have good access to specialty care.”

“Some of this area is very rural, and the senior population can get very isolated. They have outlived their friends and family, and there's not a support system.”

“I feel like when my in laws go to the doctors, sometimes they don't even see their doctor. They see a nurse practitioner.”

“I have a family member who is 70 and has dementia. She sees multiple doctors. Every time she goes, it's a whole medication summit. One person prescribes something and the other provider doesn't know or doesn't want her to take it.”

“We have one neighborhood in the north end of town and the Walgreens will close its doors in two weeks, so that will create a medication desert. The closest pharmacy by walking distance is 40 minutes away. There are some senior living apartments there and they will be out of medication access.”

Youth Population

- **Issues/Themes:**

- Lack of children's hospital leading to outmigration or transferring patients to Houston
- Need for more recreational activities for the youth
- Migration of rural communities to Beaumont for care
- Increased drug use among the youth population
- Growing mental health issues and demand for services leading to long wait times
- Local psychiatrists not accepting certain insurances leading to limited access to psychiatric care
- Need for adolescent mental health services, specifically psychiatric rehab
- Need for increased education on preventive care
- Concern about legislative efforts surrounding childhood immunizations leading to potential resurgence of preventable diseases
- Acknowledgement of long wait times for kids with higher needs, like those with Autism

"We don't have a children's hospital. The closest is 90 miles away. We take care of children in the ERs, stabilize them, but they get transported to other places in Houston."

"The quality of life for kids is lacking in terms of safe activities during their free time. The city has some great parks, but we are lacking traditional recreational and entertainment opportunities for the youth and the population at large. In terms of their health, we struggle with pediatric care in Beaumont. We go to Beaumont for doctors appointments and a large percentage of the population is doing the same thing—either Beaumont or Port Arthur."

"There is high drug use among the youth population along with behavioral issues. We do have our little league sports but those cost money and aren't cheap. It's very challenging for a family that have multiple kids. The city is looking at what they can do to increase youth activities and provide more positive things to do."

"Mental health is a big and expanding issue for the youth. We are seeing kids now who have no coping skills. So many kids are suicidal and can't deal with school or family life. The demand for services has skyrocketed. Almost all kids now have CHIP and Medicaid if they don't have private insurance. However, the lack of psychiatric coverage is concerning. We have about four psychiatrists and APRNs that do psychiatric care. Outside of that, there are only 1-2 in the region, and they generally work with commercial private insurance. It takes about two months to get in to see a psychiatrist. It's gotten better but I don't see it improving much."

"There is a need for more psychiatric rehab services for teenagers. We see a lot of patients we have to transport out to San Antonio and places like that."

"We get a lot of graduates who either stay with their parents, move out, get a job, or get their own place. Kids aren't being taught the importance of annual exams, making doctors visits a routine priority. So many from the younger generation don't like calling or talking on the phone so they don't make an appointment. Education on these aspects is important as they prepare for adulthood."

"In Texas, we have lawmakers trying to do away with childhood immunizations to attend school. I'm afraid that we will see a resurgence of diseases. A recent story discussed two teenagers who returned from a trip with rubella."

"I know for certain types of physical and occupational therapy, especially for children, there have been wait times of up to two years to have kids screened for things like autism."

Access to Dental Care

- **Issues/Themes:**

- Limited access to pediatric and specialized dentists in Orange County
- Conflicting opinions on the accessibility of local dentists
- Lack of prioritization of dental health due to:
 - Cost of care
 - Inadequate insurance coverage
- Perceived limited access to care due to local dentists not accepting new patients
- Greater difficulty in accessing dental care providers for certain populations (indigent, Medicaid)
- Local dental options that assist certain populations (indigent, Medicaid)

“I can think of a handful of well-established dentists in the area. We also recently had a new orthodontist. The wait to be seen and accessibility are much more reasonable. I called my dentist and was seen the same day. Anything more specialized or needing additional attention, we don't have a ton of specialty dentists. I know a handful that do see children, but we don't have pediatric-specific dentists in Orange County.”

“I feel like we have plenty of dentists. There are very few pediatric dentists. Other than that, parents just bring their kids to their regular dentist.”

“I do not think there's an adequate number of dentists. A lot of people don't seek dental care as a focus. In some areas, it's seen as expensive and unaffordable.”

“It's pretty accessible, but the frustrating part is that it is expensive, and insurance often does not cover it. If it does, it's at a minimum level that people can't afford. Some dentists might offer reduced prices, but I have not seen that myself. Dentists do root canals and crowns. Some do it in-office, and some refer to a specialist. If you are in pain, you can get in to be seen in a pretty good amount of time.”

“A lot of our dentists don't take new patients. You have to hunt around or find people who are taking new patients. There are quite a few of them, but not a monumental number of dental offices that aren't orthodontists as well. I would say it's better than a lot of the other specialties. There are some dentists that do offer reduced rates, and others partner with the FQHCs.”

“For our indigent population, there's a bit of a struggle. There aren't a lot of providers that accept state payment for dental care. There aren't too many pediatric dentists, but there are a handful.”

“People with dental insurance find accessibility pretty fast. For Medicaid clients, there are dental centers, like Lovett Dental in town that generally meets the needs of that population. We have dental centers with multiple services and prices for Medicaid and Managed Medicaid patients. For certain uninsured patients, they can receive some care but it's extremely limited. Lamar University still has a dental hygiene program, so patients can go get free dental cleanings.”

Populations Most at Risk

Interviewees expressed concern surrounding health disparities disproportionately affecting specific populations, including:

- Teenagers/Adolescents
 - Need for better quality of education
 - Need for mental health services, especially long term psychiatric care
 - Healthy lifestyle and preventive care education
 - Limited recreational activities
 - Lack of a local children's hospital
 - Resources for teen pregnancy
 - Drug abuse
 - Need for post-foster care programs
- Elderly
 - Transportation barriers
 - Dementia, Alzheimer's disease
 - Food insecurity
 - Cost barriers to care
- Low Income/Working Poor
 - Need for accessible childcare
 - Cost barriers to care and insurance coverage
 - Hourly shift limitation
 - Long wait times for appointments
 - Transportation barriers
 - Limited availability of affordable housing
 - Education on establishing a primary care provider and how to take care of oneself
- Obstetric
 - Desire for more female providers
- Racial/Ethnic
 - Growing Hispanic population
 - Underinsured, particularly for the Hispanic and African Americans
 - Language barriers, particularly for the Hispanic
- Transportation barriers
- Perceived racial tension
- Fear of deportation
- Cultural challenges (Vietnamese, Hispanic, African American)
- Limited access to care (limited income, long wait times)
- Orange County Residents
 - Limited adequate housing
 - Lack of pediatric dentists
 - Transportation barriers
- Hardin County Residents
 - Lack of pediatricians
 - No county food bank
- Homeless
 - Growing population, migrant and local homelessness
 - Limited number of shelters in the community, especially bridge housing
 - Difficulty accessing shelters due to organization policies
 - Mental health and drug abuse concerns
 - Limited affordable housing
 - Fragmented continuum of care
- Veterans
 - Outmigration due to lack of a nearby VA hospital
 - Limited services available at the local VA clinic
 - Growing population
 - Lack of education surround veteran benefits and what is available
 - Mental health concerns
 - Some homelessness
 - Transportation barriers
 - Challenges with providers accepting VA insurance
 - Lack of access to mental/behavioral services

LOCAL COMMUNITY HEALTH REPORTS

CHRISTUS Southeast Texas Health System – Beaumont

Community Health Needs Assessment – 2023 - 2025

- To complete the 2023-2025 CHNA, CHRISTUS Southeast Texas Health System (CSETHS) partnered with Metopio, health departments and regional and community-based organizations

Methodology

- The CHNA process involved engagement with multiple stakeholders to prioritize health needs. Stakeholders also worked to collect, curate, and interpret the data. Stakeholder groups provided insight and expertise around the indicators to be assessed, types of focus group questions to be asked to the community, interpretation of results, and prioritization of areas of highest need.
- CSETHS conducted its CHNA using a process from the Mobilizing for Action through Planning and Partnerships (MAPP) framework.
- Primary data for the CHNA was collected through four channels:
 - Community resident focus groups
 - Community resident surveys
 - Health care and social service provider focus groups
 - Key informant interviews
- Secondary data for the CHNA was aggregated on Metopio's data platform and included:
 - Hospital utilization data
 - Secondary sources including, but not limited to, the American Community Survey, the Decennial Census, the Centers for Disease Control, the Environmental Protection Agency, Housing and Urban Development and the Texas Department of State Health Services
- Residents in CSETHS's PSA provided input to the CHNA process by completing a community resident survey between October and December 2021. The survey was available online and in paper form in English and Spanish.

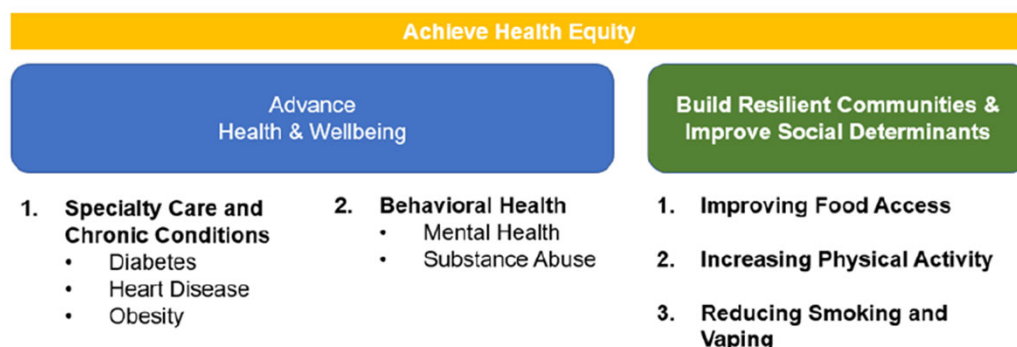

CHRISTUS Southeast Texas Health System – Beaumont

Community Health Needs Assessment – 2023 - 2025

Prioritization

- Using a prioritization framework guided by the MAPP framework, the process included a multi-pronged approach to determine health issue prioritization. The Mission team, including internal and external stakeholders, worked with the hospital leadership and community partners to prioritize the health issues of the community benefit programming.
- CSETHS is using a new structure for its identified needs, categorizing them under two domains with the overarching goal of achieving health equity. While the prioritization structure is new, CSETHS retained two of the primary health priority issues from the 2020-2022 CHNA: mental health, and food insecurities. CSETHS added six new issues in response to the needs assessment results.

SIZE	How many people are affected?	Secondary Data
SERIOUSNESS	Deaths, hospitalizations, disability	Secondary Data
EQUITY	Are some groups affected more?	Secondary Data
TRENDS	Is it getting better or worse?	Secondary Data
INTERVENTION	Is there a proven strategy?	Mission team
INFLUENCE	How much can CSETHS affect change?	Mission team
VALUES	Does the community care about it?	Survey, Focus Groups, Key Informant Interviews
ROOT CAUSES	What are the community conditions?	Mission team

INPUT REGARDING THE HOSPITAL'S PREVIOUS CHNA

Consideration of Previous Input

- IRS Final Regulations require a hospital facility to consider written comments received on the hospital facility's most recently conducted CHNA and most recently adopted Implementation Strategy in the CHNA process.
- The hospital made every effort to solicit feedback from the community by providing a feedback mechanism on the hospital's website. However, at the time of this publication, written feedback has not been received on the hospital's most recently conducted CHNA and Implementation Strategy.
- To provide input on this CHNA please see details at the end of this report or respond directly to the hospital online at the site of this download.

EVALUATION OF HOSPITAL'S IMPACT

Evaluation of Hospital's Impact

- IRS Final Regulations require a hospital facility to conduct an evaluation of the impact of any actions that were taken, since the hospital facility finished conducting its immediately preceding CHNA, to address the significant health needs identified in the hospital's prior CHNA.
- This section includes activities completed based on the 2023 to 2025 Implementation Plan.

Baptist Hospitals of Southeast Texas FY 2023 - FY 2025 Implementation Plan

A comprehensive, six-step community health needs assessment (“CHNA”) was conducted for Baptist Hospitals of Southeast Texas (BHSET) by Community Hospital Corporation (CHC). This CHNA utilizes relevant health data and stakeholder input to identify the significant community health needs in Jefferson and Orange Counties in Texas.

The CHNA Team, consisting of leadership from BHSET, met with staff from CHC on December 2, 2021 to review the research findings and prioritize the community health needs. Six significant community health needs were identified by assessing the prevalence of the issues identified from the health data findings combined with the frequency and severity of mentions in community input.

Baptist Hospitals of Southeast Texas participated in a roundtable discussion to rank the community health needs based on three characteristics: size and prevalence of the issue, effectiveness of interventions and the hospital’s capacity to address the need. Through collaboration, engagement and partnership with the community, BHSET will address the following priorities with a specific focus on affordable care and reducing health disparities among specific populations.

The six most significant needs, as ranked during the December 2nd prioritization meeting, are listed below:

- 1.) Prevention, Education and Services to Address High Mortality Rates, Chronic Diseases, Preventable Conditions and Unhealthy Lifestyles
- 2.) Access to Mental and Behavioral Health Care Services and Providers
- 3.) Access to Primary and Specialty Care Services and Providers
- 4.) Increased Emphasis on Education and Awareness of Existing Health Care Resources
- 5.) Continued Focus on COVID-19 Prevention & Response
- 6.) Access to Dental Care Services and Providers

Once this prioritization process was complete, the hospital leadership discussed the results and decided to address five of the prioritized needs in various capacities through a hospital specific implementation plan. This implementation plan addresses the top five of the six needs. “Access to Dental Care Services and Providers” is not addressed largely due to the fact that it is not a core business function of the hospital and the limited capacity of the hospital to address this need.

BHSET leadership has developed the following implementation plan to identify specific activities and services which directly address the top five priorities. The objectives were identified by studying the prioritized health needs, within the context of the hospital’s overall strategic plan and the availability of finite resources. The plan includes a rationale for each priority, followed by objectives, specific implementation activities, responsible leaders, progress, and key results (as appropriate).

The BHSET Board reviewed and adopted the 2022 Community Health Needs Assessment and Implementation Plan on March 28, 2022.

Priority #1: Prevention, Education and Services to Address High Mortality Rates, Chronic Diseases, Preventable Conditions and Unhealthy Lifestyles

Rationale:

Data suggests that higher rates of specific mortality causes and unhealthy behaviors warrants a need for increased preventive education and services to improve the health of the community. Heart disease and cancer are the two leading causes of death in Jefferson and Orange Counties. Jefferson and Orange Counties have higher mortality rates than Texas for the following causes of death: heart disease; cancer; Alzheimer's disease; chronic lower respiratory diseases; cerebrovascular disease; accidents (unintentional injuries); diabetes mellitus; nephrotic syndrome and nephrosis; intentional self-harm (suicide); lung and bronchus cancer; and colon & rectum cancer. Additionally, Jefferson County has a higher prostate cancer mortality rate than the state and Orange County has a higher rate of chronic liver disease and cirrhosis than the state.

Both Jefferson and Orange Counties have higher prevalence rates of chronic conditions such as adult diabetes, obesity, arthritis, adult asthma, diabetes for Medicare beneficiaries and high blood pressure for Medicare beneficiaries than the state. Jefferson County has higher prevalence rates of communicable diseases such as chlamydia, gonorrhea, syphilis and HIV than the state. Both counties have higher percentages of residents participating in unhealthy lifestyle behaviors such as smoking and physical inactivity than the state. With regards to maternal and child health, specifically, Jefferson and Orange Counties have higher low birth weight births and higher teen (age 0-19 years) birth rates than the state.

Data suggests that Jefferson and Orange County residents are not appropriately seeking preventive care services, such as timely pap tests and adults (age 18-64) who did not receive their flu vaccine in the past year. Orange County has a lower rate of individuals who received a mammogram when compared to the state. Additionally, both counties have a lower rate of primary care providers per 100,000 persons as compared to the state, and Orange County has a lower rate of dentists per 100,000 persons than the state as well.

Several interviewees noted that there are emerging chronic conditions like obesity, diabetes, heart disease and hypertension in the community. Interviewees expressed concern surrounding the increasing need to address chronic conditions in the area. One interviewee stated: "There are nonprofits in the community attempting to service as many of our residents as they can, but the need is greater than our capacity to serve." Additionally, interviewees discussed limited availability of the built environment as well as wellness opportunities in the area, particularly in Orange County. One interviewee stated: "...the first thing Orange County needs is a hospital, and then we just need education to make sure everyone knows what's available and could get regular health checks that are preventive that would help alleviate more serious problems down the road."

Interviewees also discussed the impact of COVID-19 on prevalence of lung issues like asthma and COPD as well as HIV infections. One interviewee stated: "...we're going to have a higher case rate of HIV and that is because of the interruption with HIV testing over the past year. Right now we are seeing more new cases of HIV and I fear we are going to see more in the younger population." It was mentioned that there is limited awareness and understanding of health care resources and benefits available in minority populations, particularly the Hispanic population. One interviewee stated: "Our Hispanic population doesn't know about the different health care benefits that are available. It's about getting them to be aware and checking on everything and taking those preventive steps." Interviewees also emphasized the disparate rates of chronic conditions in the African American population. One interviewee stated: "We still have an inordinate number of our black community suffering from diabetes, high blood pressure and that's a disparity that's ongoing and we see it. We need to be active in educating where we can."

Objective:

Implement programs and provide educational opportunities that seek to address unhealthy lifestyles and behaviors in the community

Priority #2: Access to Mental and Behavioral Health Care Services and Providers

Rationale:

Data suggests that residents in Jefferson and Orange Counties do not have adequate access to mental and behavioral health care services and providers. Jefferson and Orange Counties have a lower rate of mental health care providers per 100,000 than the state. Additionally, both counties have higher rates of adult (age 18+) depression and those individuals who reported having 14+ days of poor mental health.

Many interviewees mentioned the significant impact of natural disasters and the COVID-19 pandemic on residents' mental health. Several interviewees discussed the difficulty in recruiting mental and behavioral health providers and how the shortage of providers and resources is leading to long wait times for all payer types and outmigration to Houston. One interviewee stated: "The name of the game is long wait times for mental health, regardless of payment source. Even if you're cash, Medicare, low income, sliding scale, it's very hard to get in as a new patient." Another interviewee stated: "People who need psychological counseling go to Houston. They'll find Houston counseling centers with certified therapists, licensed counselors to go to."

Interviewees also discussed the need for affordable outpatient services and the concern surrounding how mental and behavioral health patients are landing in the Emergency Room, judicial system or using ambulances. One interviewee stated: "Post pandemic, there's an increase in mental health patients. We could double what we've put out there. A lot of people with mental health problems just end up in the back of an ambulance or the back of a police car." Another interviewee stated: "Mental and behavioral health is an issue, especially as it pertains to individuals placed in the judicial system inaccurately that really are more a mental or behavioral health issue."

Several people discussed the need for substance abuse treatment for women in the community and concerns about the impact of COVID-19 on remote access of services. One interviewee stated: "The need for substance abuse treatment is dire. Substance abuse disorder clogs our jails and prisons and also clogs our hospital ERs. Substance use disorders have been mainly focused on men however we're seeing a huge growth in a need of services for women." Another interviewee stated: "There's an enormous change since COVID-19 came around. Almost all mental health providers are remote now, psychiatrists as well as counselors. There are a few who have gone back to face to face, but very few. Most are very remote."

Objective:

Provide a point of access for mental health services in the community

Priority #3: Access to Primary and Specialty Care Services and Providers

Rationale:

Both counties have higher preventable hospitalization rates than the state. Additionally, Jefferson and Orange Counties have several Health Professional Shortage Area and Medically Underserved Area/Population designations as defined by the U.S. Department of Health and Human Services Health Resources and Services Administration (HRSA).

With regards to primary care access, interviewees noted difficulty accessing primary care in Southeast Texas, particularly for the low income, un/underinsured and Medicare/Medicaid residents in the area. Interviewees discussed the limited supply of resources accepting underserved residents and how that is leading to long wait times. One interviewee stated: "...There's not a huge amount of PCPs who are taking Medicare, Medicaid, and/or un/underinsured patients. There are a few resources in town and the wait times for those resources are very long."

Interviewees discussed long wait times for appointments in the community and that is leading to patients inappropriately using the Emergency Room, individuals foregoing care and worsened health outcomes. In conjunction to that, interviewees mentioned how the urgent care services are used by individuals because they perceive it to be lower in cost and having a shorter wait time than their provider. One interviewee stated: "I seek out one of the urgent care facilities when I'm sick because I know it's a shorter wait time and what my copay will be, so I very seldom use my PCP when I'm ill."

It was noted that residents who were impacted by disasters are utilizing urgent care facilities as a stop-gap measure. Several people mentioned the difficulty in accessing primary care in Orange County and the need for greater diversity in providers who can relate to minority populations in the community. One interviewee stated: "We need to have more diversity in primary care providers. We have an emerging Spanish speaking population. They may understand English but they're more comfortable expressing themselves in Spanish. There's also a shortage of black female providers and more requests for black female providers."

Access to specialty care was brought up by several interviewees as a need because there has been historical outmigration to Houston due to a "bigger is better" perception of services. Additionally, several people noted the long wait times in the area for specialty care services and that is leading to individuals foregoing care, particularly the un/underinsured and Medicaid patients. One interviewee stated: "They do have wait times, there are many who do not accept Medicaid or un/underinsured so it takes a longer time for people to get into care. That's actually causing a lot of people to forego care."

Interviewees also discussed the difficulty in finding providers with similar cultural backgrounds and how this issue is leading to some individuals foregoing care. In Jefferson County specifically, interviewees mentioned the limited supply of certain specialties causing patients to travel to nearby communities and these services include: OB/GYN, Neurology, Rheumatology, Endocrinology, Pain management, Ortho/Spine, Female Cancer, and inpatient Pediatric surgery. For Orange County, it was mentioned that there was a greater shortage of specialty services due to lack of a hospital. One interviewee stated: "In Orange County, we've lost a lot of our specialty doctors because there's not a hospital so they don't want to be in a smaller area without a hospital."

Objective:

Implement and offer programs that aim to address access to primary and specialty care services in the community through recruitment and retention efforts

Priority #4: Increased Emphasis on Education and Awareness of Existing Health Care Resources

Rationale:

Interviewees raised concern surrounding the limited awareness of local opportunities to access health resources and the difference between health care access points. One interviewee stated: "People just don't know where to go. The community in general is not very visible about where people can go just for health care. It doesn't matter if it's a pregnancy test or surgery, there doesn't seem to be a hub where everyone goes to. People do not know where to go. There's just no navigator - this is not just uninsured people, it's all different kinds of people and payer types."

Several interviewees discussed health literacy, connectivity/social media and cost barriers to care as factors inhibiting awareness of health care resources in the community. Concern was raised surrounding lack of awareness of available primary care services for the underserved residents in the community. Several people discussed the difficulty in accessing/utilizing appropriate healthcare resources for the underserved population and how that is leading to delaying or foregoing care. One interviewee stated: "I don't think people are aware of everything they can get that may be low cost. There's a lot of people that may not go seek out medical help when they have an issue for fear of not having the money to pay for it."

It was mentioned that in Orange County, there is a lack of resources and that is leading to a limited number of residents seeking appropriate care. Lastly, challenges were discussed in finding methods of communication and education for the homeless population in the community. One interviewee stated: "There is not a single shelter in Orange County for homeless people and that makes it hard to communicate with them, educate them, even let them know what is available to help them. When they don't have shelter, it also means they're going to the doctor and getting medications they have nowhere to store."

Objective:

Participate in initiatives and create opportunities to emphasize and educate community members on existing health care resources

<p>4.E. BHSET will continue to increase awareness of its primary and specialty care service offerings in the community through various media outlets and advertisements.</p>	Director of Marketing	ONGOING	<p>Q1 - 2 billboards for Lumberton outpatient center, 2 newspaper ads and weekly Facebook posts; all new doctors have a newspaper ad, a Facebook post and a blast email through Constant Contact and also a patient portal screen in two different waiting rooms</p> <p>Q2 - Facebook ads and videos on bone density testing at LOPC as well as introduction of new practitioner; ads about our Orange NP clinic with full time hours; ads about new practitioner in the China clinic</p> <p>Q3 - direct mail piece to advertise the Lumberton Outpatient Center (LOPC) and Kenneth Fisher, NP to Hardin County residents</p> <p>Q4 - new commercial about cardiac services; Digital ads: BPN clinics, cardiac, behavioral health, bariatrics, and cancer</p>	ONGOING	<p>Q1 - commercial about joint rejuvenation with Dr. Bransford (cardiac EP); direct mail piece to 2,700 homes on cardiology services</p> <p>Q2 - direct mail piece to over 9,000 homes on Breast Concierge Program</p> <p>Q3 - TV commercial about Bariatric program; direct mail piece to over 5,000 homes on LOPC</p> <p>Q4 - TV commercial about Women's services; print and digital ads featuring Cancer services, behavioral health, infusion services and locations & the TAVR program; also received free press on our NICU success stories</p>	ONGOING	<p>Q1 - print and digital ads featuring wound care, Women's services, PEDI ER; Billboard and TV commercial featuring cancer services & bariatrics</p> <p>Q2 - participated in the Orange Scarecrow festival to promote bariatric services, held a beam raising to celebrate the construction of the new cancer center, GERD Awareness event for 1,000 participants, Special Christmas commercial promoting Cardiac Services (even Santa needed a new heart)</p> <p>Q3 - participated in the Lamar State College Port Arthur health fair featuring Women's services and Behavioral Health as well as screening tools for lung cancer and cardiac health</p> <p>Q4 - participated in Gulf Coast Health Fair focusing on women's health services including childbirth and lactation education and support (200 participants)</p>

Priority #5: Continued Focus on COVID-19 Prevention and Response

Rationale:

Both counties have a lower percent of their population (age 5+) vaccinated with the COVID-19 vaccine as compared to the state (information as of November 30, 2021).

Interviewees expressed appreciation for the hospital and the community's quick response to the COVID-19 pandemic as well as the distribution of vaccines and appropriate communication regarding information about the pandemic. However, concerns were brought up about the impact of the pandemic including: vaccine administration; new virus strains; long term health effects of the COVID-19 virus as well as the vaccine, availability of vaccines and the limited supply of associated specialists; and the financial impact on health care systems. One interviewee stated: "We don't know what's going to happen with people who have had COVID-19, and we don't have a lot of either one of those specialists in this town. It's going to have a lot of lasting effects, we just don't know yet." Another interviewee stated: "The concern around the COVID-19 vaccine - what will this look like moving forward? Will it be available every year? What are the long term effects? The long term effects of vaccinations and availability is my biggest concern and think it'll be the biggest concern of a lot of people."

It was also mentioned that there is an increasing rate of mental health concerns due to COVID-19 and the pandemic, including youth substance abuse and isolation and fear in the elderly population. One interviewee specifically stated: "With COVID-19, people have been home with nothing to do and are so bored that they're turning to substances. Substance abuse seems to be everywhere in the schools, and now it seems to be in the middle schools."

Objective:

Implement and offer programs that aim to reduce the impact of the COVID-19 pandemic

PREVIOUS CHNA PRIORITIZED HEALTH NEEDS

Previous Prioritized Needs

2019 Prioritized Needs

1. Prevention, Education and Services to Address High Mortality Rates, Chronic Diseases, Preventable Conditions and Unhealthy Lifestyles
2. Access to Affordable Care and Reducing Health Disparities Among Specific Populations
3. Access to Mental and Behavioral Health Care Services and Providers
4. Need for Increased Emphasis on Sex Education and Communicable Disease Prevention
5. Access to Specialty Care Services and Providers

2022 Prioritized Needs

1. Prevention, Education and Services to Address High Mortality Rates, Chronic Diseases, Preventable Conditions and Unhealthy Lifestyles
2. Access to Mental and Behavioral Health Care Services and Providers
3. Access to Primary and Specialty Care Services and Providers
4. Increased Emphasis on Education and Awareness of Existing Health Care Resources
5. Continued Focus on COVID-19 Prevention & Response

2025 CHNA PRELIMINARY HEALTH NEEDS

2025 Preliminary Health Needs

- Access to Affordable Care and Reducing Health Disparities Among Specific Populations
- Access to Mental and Behavioral Health Care Services and Providers
- Continued Focus on Community Infrastructure
- Continued Recruitment & Retention of Healthcare Workforce
- Need for Increased Emphasis on a Collaborative Continuum of Care
- Prevention, Education and Services to Increase Community Awareness and Address High Mortality Rates, Chronic Diseases, Preventable Conditions and Unhealthy Lifestyles

PRIORITIZATION

The Prioritization Process

- In October 2024 leadership from BHSET met with CHC to review findings and prioritize the community's health needs. Attendees from the hospital included:
 - Justin Doss, Chief Executive Officer
 - Bryan Chandler, Chief Operating Officer
 - Kathy Degenstein-Gartman, Chief Nursing Officer
 - Gary Troutman, Chief Financial Officer
 - William Toon, Chief IT Officer
 - Stephanie Harris, VP of Marketing & Communications
 - Hannah Schiesler, VP of Human Resources
 - Garret Craver, Administrator of Behavioral Health & Residency Programs
 - Payton Ferguson, Administrative Resident
- Leadership ranked the health needs based on three factors:
 - Size and Prevalence of Issue
 - Effectiveness of Interventions
 - Hospital's Capacity
- See the following page for a more detailed description of the prioritization process.

The Prioritization Process

- The CHNA Team utilized the following factors to evaluate and prioritize the significant health needs.

1. Size and Prevalence of the Issue
<ul style="list-style-type: none">a. How many people does this affect?b. How does the prevalence of this issue in our communities compare with its prevalence in other counties or the state?c. How serious are the consequences? (urgency; severity; economic loss)
2. Effectiveness of Interventions
<ul style="list-style-type: none">a. How likely is it that actions taken will make a difference?b. How likely is it that actions will improve quality of life?c. How likely is it that progress can be made in both the short term and the long term?d. How likely is it that the community will experience reduction of long-term health cost?
3. Baptist Hospitals of Southeast Texas Capacity
<ul style="list-style-type: none">a. Are people at Baptist Hospitals of Southeast Texas likely to support actions around this issue? (ready)b. Will it be necessary to change behaviors and attitudes in relation to this issue? (willing)c. Are the necessary resources and leadership available to us now? (able)

Health Needs Ranking

- Hospital leadership participated in a prioritized ballot process to rank the health needs in order of importance, resulting in the following order:
 1. Access to Affordable Care and Reducing Health Disparities Among Specific Populations
 2. Access to Mental and Behavioral Health Care Services and Providers
 3. Continued Focus on Community Infrastructure
 4. Continued Recruitment & Retention of Healthcare Workforce
 5. Need for Increased Emphasis on a Collaborative Continuum of Care
 6. Prevention, Education and Services to Increase Community Awareness and Address High Mortality Rates, Chronic Diseases, Preventable Conditions and Unhealthy Lifestyles

Final Priorities

- Hospital leadership decided to address five of the six ranked health needs. The final health priorities that BHSET will address through its Implementation Plan are, in descending order:
 1. Access to Mental and Behavioral Health Care Services and Providers
 2. Continued Recruitment & Retention of Healthcare Workforce
 3. Prevention, Education and Services to Increase Community Awareness and Address High Mortality Rates, Chronic Diseases, Preventable Conditions and Unhealthy Lifestyles
 4. Need for Increased Emphasis on a Collaborative Continuum of Care
 5. Access to Affordable Care and Reducing Health Disparities Among Specific Populations

PRIORITIES THAT WILL NOT BE ADDRESSED

Needs That Will Not Be Addressed

- BHSET decided not to specifically address “Continued Focus on Community Infrastructure” largely due to its position (last) on the prioritized list and the hospital’s capacity to address that need.
- While BHSET acknowledges that this is a significant need in the community and will work with local community organizations to see how the facility can assist in these areas, the identified priority will not be addressed by the hospital since it is not a core business function of the hospital and the leadership team felt that resources and efforts would be better spent addressing the remaining five prioritized needs.

RESOURCES IN THE COMMUNITY

Additional Resources in the Community

- In addition to the services provided by BHSET, other charity care services and health resources that are available in Jefferson and Orange Counties are included in this section.

Mom's Meals

- Mom's Meals delivers fully prepared meals to homes in Texas, and offers programs for chronic care, long-term care, post-discharge care, and self-pay individuals.
- You can visit their website for more information:
<https://www.momsmeals.com/>

Sacred Circle – Baptist Regional Cancer Network patient and caregivers support group. Meetings held on the second Tuesday of each month in the Resource Room at the Baptist Regional Cancer Network Julie & Ben Rogers Cancer Institute located at 3555 Stagg Drive from noon to 1PM. It's a place to receive practical information, exchange information with others, and support one another for the mutual benefit of everyone touched by cancer.

Pink Power Network, Breast Cancer Support Group – A support group specifically for our breast cancer patients. This program is provided Baptist Regional Cancer Network and by the Julie Rogers "Gift of Life".

**Program offered twice in one day on the
3rd Thursday of every month.**

12:00pm

**Dauphin Women's Center
Conference Room
740 Hospital Drive, Ste. 140
RSVP 409-212-7962**

6:00pm

**Gift of Life
148 South Dowlen Rd.
RSVP 409-833-3663**

Look Good Feel Better – A skin care session by a trained licensed cosmetologist. The participants get tips on managing their appearance due to treatment side effects. They receive a kit of hypoallergenic makeup and lotions through our partnership with the National Cosmetology Association. This program is provided by the American Cancer Society and Baptist Regional Cancer Network.

**1st Monday of every month
11:00am**

**Dauphin Women's Center
Conference Room
RSVP 409-351-9788**

Baptist Hospitals of Southeast Texas complies with applicable Federal civil rights laws and does not discriminate on the basis of race, color, national origin, age, disability, or sex. Baptist Hospitals of Southeast Texas does not exclude people or treat them differently because of race, color, national origin, age, disability, or sex.

American Cancer Society
www.cancer.org
1-800-227-2345

Reach to Recovery – A one-on-one support program for newly diagnosed breast cancer patients, with trained mentors, providing information, bras, cover with fluff, etc.

Road to Recovery/Transportation – Volunteer drivers, who have been through training and a background check, drive patients to and from their treatments. We reimburse their mileage and/or parking. Our drivers are currently bringing patients to the Baptist Cancer Center. We also provide gas cards as needed.

Cancer Survivors Network – An online support system for patients and caregivers that provides an outlet for them to chat in groups or one-on-one with someone the same age and/or same diagnosis so that they can share their stories and cancer journey. Participants can set up their own individual page through www.cancer.org/csn.

Patient Service Center – A special group of patient navigators can be accessed for patient's special needs such as services we offer (as above) or for referral resources. These resources could be local, state-wide, or nationwide. They are available for any cancer related need. The PSC Navigators can be accessed by calling **1-800-227-2345**.

Resource Books – These offer patients a resource on different types of cancer, chemo, radiation, nausea, etc. For more information call **1-800-227-2345**.

Supplies and Other Services – Wigs, turbans, and additional services are discussed with patients and are available at our local office. Patient Resource Information is available 24/7 at **1-800-227-2345**.

Julie Rogers "Gift of Life" Program
www.giftoflifebmt.org
409-833-3663

Man to Man, Prostate Cancer Support Group – a one-on-one support program for newly diagnosed prostate cancer patients partnered with the Julie Rogers "Gift of Life" Program.

Meets on the 2nd Tuesday of every month at 6:00 pm
St. Mark's Episcopal Church Downtown Beaumont
(680 Calder Avenue)

Free Prostate Cancer Screenings – Potentially lifesaving tests and exams that medically underserved clients would otherwise be unable to afford, equalizing access to early detection tools. Call for eligibility at **409-860-3369**.

Free Mammograms – Potentially lifesaving tests and exams that medically underserved clients would otherwise be unable to afford, equalizing access to early detection tools. Call for eligibility at **409-860-3369**.

Cancer Resource Library – Books and DVD's available about healthy living, breast cancer, and prostate cancer.

Don't Smoke Your Life Away – Preventing tobacco usage before it starts and encouraging current smoking adolescents and adults to quit smoking.

Educational Outreach – Aimed at raising awareness of the lifesaving benefits of early detection tests and exams which is key in reducing cancer mortality. Programming is available on breast prostate, testicular, and ovarian cancers, as well as healthy living to reduce cancer risk.

Additional Resources

2-1-1 Texas – A program of the Texas Health and Human Services Commission, is committed to helping Texas citizens connect with the services they need. Available in more than 90 languages 24/7; calls are answered by HHSC 2-1-1 – Texas Information and Referral Network.

Grief and Bereavement Support Group – Compassion Hospice offers group counseling at no cost to individuals who have suffered a loss. The group is led by a licensed professional counselor. Meetings are held the last Wednesday of each month, RSVP **409-835-8357**.

Nutrition and Services for Seniors – A local agency serving Jefferson and Hardin County senior citizens age 60 and older by providing transportation to and from appointments at a discounted rate. The nutritional supplement, Ensure, is available at a discounted rate of \$23 per case to the above population. Call **409-892-4455** for further details.

Department of Aging and Disability Services (DADS) – Provides assistance to those individuals who are elderly and disabled. Assistance includes home-based services such as a provider to help with light housekeeping and preparation of meals. For Provider Services call **1-866-449-1919** or **2-1-1 Texas**.

Towers Elite Cleaning Service – A local maid service company that provides free housecleaning to women currently undergoing treatment for any type of cancer. For more information call **409-832-8444** or visit their website at www.towerselite.com.

Albert E. and Gena Reaud Guest House
3120 College Street
Beaumont 212-6500

The Guest House is designed to house families facing a medical crisis and who have a loved one receiving care at any local Beaumont hospital. Eases the emotional and financial burden families carry by providing a home-away-from-home in close proximity to their loved ones receiving treatment. Offering first class accommodations at a very affordable price – just \$35.00 per night.

INFORMATION GAPS

Information Gaps

- While the following information gaps exist in the health data section of this report, please note that every effort was made to compensate for these gaps in the interviews conducted by Community Hospital Corporation.
 - This assessment seeks to address the community's health needs by evaluating the most current data available. However, published data inevitably lags behind due to publication and analysis logistics.
 - Due to smaller population numbers and the general rural nature of Jefferson and Orange Counties, 1-year estimates for the majority of data indicators are statistically unreliable. Therefore, sets of years were combined to increase the reliability of the data while maintaining the county-level perspective.

ABOUT COMMUNITY HOSPITAL CORPORATION

About CHC

- Community Hospital Corporation owns, manages and consults with hospitals through three distinct organizations – CHC Hospitals, CHC Consulting and CHC ContinueCare, which share a common purpose of preserving and protecting community hospitals.
- Based in Plano, Texas, CHC provides the resources and experience community hospitals need to improve quality outcomes, patient satisfaction and financial performance. For more information about CHC, please visit the website at: www.chc.com

APPENDIX

- SUMMARY OF DATA SOURCES
- DATA REFERENCES
- HPSA AND MUA/P INFORMATION
- INTERVIEWEE INFORMATION
- PRIORITY BALLOT

SUMMARY OF DATA SOURCES

Summary of Data Sources

- **Demographics**

- This study utilized demographic data from **Syntellis**.
- The **United States Census Bureau**, provides foreign-born population statistics by county and state; https://data.census.gov/table?q=DP02&g=010XX00US_040XX00US48_050XX00US48245,48361.
- This study utilizes data from the **Economic Innovation Group**, which provides distressed community index scores by county and state: <https://eig.org/distressed-communities/2022-dci-interactive-map/?path=county/48113&view=county>.
- **Economic Policy Institute, Family Budget Map** provides a break down of estimates monthly costs in specific categories for Jefferson & Orange Counties; <https://www.epi.org/resources/budget/budget-map/>.
- The **United States Bureau of Labor Statistics**, Local Area Unemployment Statistics provides unemployment statistics by county and state; <https://www.bls.gov/lau/tables.htm>.
- **Data USA** provides access to industry workforce categories as well as access to transportation data at the county and state level: <https://datausa.io/>.
- This study also used data collected by the **Small Area Income and Poverty Estimates (SAIPE)**, that provides Supplemental Nutrition Assistance Program (SNAP) Benefits as well as poverty estimates by county and state: https://www.census.gov/data-tools/demo/saie/#/?map_geoSelector=aa_c and <https://www.census.gov/data/datasets/time-series/demo/saie/model-tables.html>.
- Food insecurity information is pulled from **Feeding America's Map the Meal Gap**, which provides food insecurity data by county, congressional district and state: <http://map.feedingamerica.org/>.
- This study also used health data collected by the **SparkMap**, a national platform that provides public and custom tools produced by the Center for Applied Research and Engagement Systems (CARES) at the University of Missouri. Data can be accessed at <https://engagementnetwork.org/>.
- The **Texas Realtors** provides Texas Quarterly Housing Report that include housing prices and trends by market service areas: <https://www.texasrealestate.com/market-research/quarterly-housing-report/>.

- **Health Data**

- The **County Health Rankings & Roadmaps (CHR&R)**, a program of the University of Wisconsin Population Health Institute, draws attention to why there are differences in health within and across communities. The program highlights policies and practices that can help everyone be as healthy as possible. CHR&R aims to grow a shared understanding of health, equity and the power of communities to improve health for all. This work is rooted in a long-term vision where all people and places have what they need to thrive; <http://www.countyhealthrankings.org/>.

Summary of Data Sources

- **Health Data (continued)**

- The **Centers for Disease Control and Prevention National Center for Health Statistics WONDER Tool** provides access to public health statistics and community health data including, but not limited to, mortality, chronic conditions, and communicable diseases; <http://wonder.cdc.gov/ucd-icd10.html>.
- The **Texas Cancer Registry** is a statewide, population-based registry that serves as the foundation for measuring the cancer burden in Texas. Data can be accessed at: <https://www.cancer-rates.info/tx/>.
- This study also used health data collected by the **SparkMap**, a national platform that provides public and custom tools produced by the Center for Applied Research and Engagement Systems (CARES) at the University of Missouri. Data can be accessed at <https://engagementnetwork.org/>.
- This study utilizes a county level data from **Center for Disease Control and Prevention, PLACES: County Data** (GIS Friendly Format), 2022 release, filtered for Jefferson and Orange Counties, TX, https://data.cdc.gov/500-Cities-Places/PLACES-County-Data-GIS-Friendly-Format-2022-releas/xyst-f73f/about_data.
- This study utilizes a county level data from **Center for Disease Control and Prevention, PLACES: County Data** (GIS Friendly Format), 2023 release, filtered for Jefferson and Orange Counties, TX, https://data.cdc.gov/500-Cities-Places/PLACES-County-Data-GIS-Friendly-Format-2023-releas/7cmc-7y5g/about_data.
- This study utilizes a county level data from **Center for Disease Control and Prevention, PLACES: County Data** (GIS Friendly Format), 2024 release, filtered for Jefferson and Orange Counties, TX, https://data.cdc.gov/500-Cities-Places/PLACES-County-Data-GIS-Friendly-Format-2024-releas/i46a-9kgh/about_data.
- This study utilizes a state level data from **Center for Disease Control and Prevention, Chronic Disease Indicators**, filtered for Texas; <https://www.cdc.gov/cdi/>.
- The **Centers for Medicare & Medicaid Services, Office of Minority Health**, provides public tools to better understand disparities in chronic diseases. Data can be accessed at; <https://data.cms.gov/mapping-medicare-disparities>.
- The **Annie E. Casey Foundation** is a private charitable organization, dedicated to helping build better futures for disadvantaged children in the United States. One of their initiatives is the Kids Count Data Center, which provides access to hundreds of measures of child well-being by county and state; <http://datacenter.kidscount.org/>.
- The **U.S. Census Bureau's Small Area Health Insurance Estimates** program produces the only source of data for single-year estimates of health insurance coverage status for all counties in the U.S. by selected economic and demographic characteristics. Data can be accessed at <https://www.census.gov/data-tools/demo/sahie/index.html>.
- The **U.S. Department of Health and Human Services Health Resources and Services Administration (HRSA)** provides Medically Underserved Area / Population and Health Professional Shortage Area scores, and can be accessed at: <https://datawarehouse.hrsa.gov/tools/analyzers.aspx>.

- **Phone Interviews**

- CHC conducted interviews on behalf of BHSET from July 18, 2024 – August 8, 2024.
- Interviews were conducted and summarized by Alex Campbell, Senior Planning Analyst.

DATA REFERENCES

Distressed Communities Index

- The Distressed Communities Index (DCI) brings attention to the deep disparities in economic well-being that separate U.S. communities. The latest Census data is used to sort zip codes, counties, and congressional districts into five quintiles of well-being: **prosperous**, **comfortable**, **mid-tier**, **at risk**, and **distressed**. The index allows us to explore disparities within and across cities and states, as well.
- The seven components of the index are:
 1. **No high school diploma:** Share of the 25 and older population without a high school diploma or equivalent.
 2. **Housing vacancy rate:** Share of habitable housing that is unoccupied, excluding properties that are for seasonal, recreational, or occasional use.
 3. **Adults not working:** Share of the prime-age (25-54) population that is not currently employed.
 4. **Poverty rate:** Share of the population below the poverty line.
 5. **Median income ratio:** Median household income as a share of metro area median household income (or state, for non-metro areas and all congressional districts).
 6. **Changes in employment:** Percent change in the number of jobs over the past five years.
 7. **Changes in establishments:** Percent change in the number of business establishments over the past five years.

2024 Poverty Guidelines

2024 POVERTY GUIDELINES FOR THE 48 CONTIGUOUS STATES AND THE DISTRICT OF COLUMBIA	
Persons in family/household	Poverty guideline
1	\$15,060
2	\$20,440
3	\$25,820
4	\$31,200
5	\$36,580
6	\$41,960
7	\$47,340
8	\$52,720
For families/households with more than 8 persons, add \$5,380 for each additional person.

HPSA AND MUA/P INFORMATION

Health Professional Shortage Areas

Background

- Health Professional Shortage Areas (HPSAs) are designations that indicate health care provider shortages in:
 - Primary care
 - Dental health
 - Mental health
- These shortages may be geographic-, population-, or facility-based:
 - Geographic Area: A shortage of providers for the entire population within a defined geographic area.
 - Population Groups: A shortage of providers for a specific population group(s) within a defined geographic area (e.g., low income, migrant farmworkers, and other groups)
 - Facilities:
 - Other Facility (OFAC)
 - Correctional Facility
 - State Mental Hospitals
 - Automatic Facility HPSAs (FQHCs, FQHC Look-A-Likes, Indian Health Facilities, HIS and Tribal Hospitals, Dual-funded Community Health Centers/Tribal Clinics, CMS-Certified Rural Health Clinics (RHCs) that meet National Health Service Corps (NHSC) site requirements)

Health Professional Shortage Areas

Background (continued)

- HRSA reviews these applications to determine if they meet the eligibility criteria for designation. The main eligibility criterion is that the proposed designation meets a threshold ratio for population to providers.
- Once designated, HRSA scores HPSAs on a scale of 0-25 for primary care and mental health, and 0-26 for dental health, with higher scores indicating greater need.

Medically Underserved Areas/Populations

Background

- Medically Underserved Areas (MUAs) and Medically Underserved Populations (MUPs) are areas or populations designated by HRSA as having too few primary care providers, high infant mortality, high poverty or a high elderly population.
- MUAs have a shortage of primary care services for residents within a geographic area such as:
 - A whole county
 - A group of neighboring counties
 - A group of urban census tracts
 - A group of county or civil divisions
- MUPs are specific sub-groups of people living in a defined geographic area with a shortage of primary care services. These groups may face economic, cultural, or linguistic barriers to health care. Examples include, but are not limited to:
 - Homeless
 - Low income
 - Medicaid eligible
 - Native American
 - Migrant farmworkers

Medically Underserved Areas/Populations

Background (continued)

- The Index of Medical Underservice (IMU) is applied to data on a service area to obtain a score for the area. IMU is calculated based on four criteria:
 1. Population to provider ratio
 2. Percent of the population below the federal poverty level
 3. Percent of the population over age 65
 4. Infant mortality rate
- The IMU scale is from 1 to 100, where 0 represents ‘completely underserved’ and 100 represents ‘best served’ or ‘least underserved.’
- Each service area or population group found to have an IMU of 62.0 or less qualifies for designation as a Medically Underserved Area or Medically Underserved Population.

PRIORITY BALLOT

Prioritization Ballot

Upon reviewing the comprehensive preliminary findings report for the 2025 Baptist Hospitals of Southeast Texas (BHSET) Community Health Needs Assessment (CHNA), we have identified the following needs for the BHSET CHNA Team to prioritize *in order of importance*.

Please review the following criteria (Size and Prevalence of the Issue, Effectiveness of Interventions and BHSET Capacity) that we would like for you to use when identifying the top community health priorities for BHSET, then cast 3 votes for each priority.

1. Size and Prevalence of the Issue

In thinking about the "Size and Prevalence" of the health need identified, ask yourself the following questions listed below to figure out if the overall magnitude of the health issue should be ranked as a "1" (least important) or a "5" (most important).

- a. How many people does this affect?**
- b. How does the prevalence of this issue in our communities compare with its prevalence in other counties or the state?**
- c. How serious are the consequences? (urgency; severity; economic loss)**

2. Effectiveness of Interventions

In thinking about the "Effectiveness of Interventions" of the health need identified, ask yourself the following questions listed below to figure out if the overall magnitude of the health issue should be ranked as a "1" (least important) or a "5" (most important).

- a. How likely is it that actions taken by BHSET will make a difference?**
- b. How likely is it that actions taken by BHSET will improve quality of life?**
- c. How likely is it that progress can be made in both the short term and the long term?**
- d. How likely is it that the community will experience reduction of long-term health cost?**

3. BHSET Capacity

In thinking about the Capacity of BHSET to address the health need identified, ask yourself the following questions listed below to figure out if the overall magnitude of the health issue should be ranked as a "1" (least important) or a "5" (most important).

- a. Are people at BHSET likely to support actions around this issue? (ready)**
- b. Will it be necessary to change behaviors and attitudes in relation to this issue? (willing)**
- c. Are the necessary resources and leadership available to us now? (able)**

****Please note that the identified health needs below are in alphabetical order for now, and will be shifted in order of importance once they are ranked by the CHNA Team.***

* 1. Access to Affordable Care and Reducing Health Disparities Among Specific Populations

Section 2:

Implementation Plan

Baptist Hospitals of Southeast Texas FY 2026 - FY 2028 Implementation Plan

A comprehensive, six-step community health needs assessment (“CHNA”) was conducted for Baptist Hospitals of Southeast Texas (BHSET) by Community Hospital Corporation (CHC). This CHNA utilizes relevant health data and stakeholder input to identify the significant community health needs in Jefferson and Orange Counties in Texas.

The CHNA Team, consisting of leadership from BHSET, reviewed the research findings in October 2024 to prioritize the community health needs. Six significant community health needs were identified by assessing the prevalence of the issues identified from the health data findings combined with the frequency and severity of mentions in community input.

The list of prioritized needs, in descending order, is listed below:

- 1.) Access to Mental and Behavioral Health Care Services and Providers
- 2.) Continued Recruitment & Retention of Healthcare Workforce
- 3.) Prevention, Education and Services to Increase Community Awareness and Address High Mortality Rates, Chronic Diseases, Preventable Conditions and Unhealthy Lifestyles
- 4.) Need for Increased Emphasis on Collaborative Continuum of Care
- 5.) Access to Affordable Care and Reducing Health Disparities Among Specific Populations
- 6.) Continued Focus on Community Infrastructure

The CHNA Team participated in a prioritization process using a structured matrix to rank the community health needs based on three characteristics: size and prevalence of the issue, effectiveness of interventions, and their capacity to address the need. Once this prioritization process was complete, the BHSET leadership discussed the results and decided to address five of the six prioritized needs in various capacities through a hospital specific implementation plan. “Continued Focus on Community Infrastructure” is not directly addressed in the hospital’s implementation plan. “Continued Focus on Community Infrastructure” is not a core business function of the hospital and the leadership team felt that resources and efforts would be better spent addressing the other prioritized needs.

Hospital leadership has developed an implementation plan to identify specific activities and services which directly address the top five priorities. The objectives were identified by studying the prioritized health needs, within the context of the hospital’s overall strategic plan and the availability of finite resources. The plan includes a rationale for each priority, followed by objectives, specific implementation activities, responsible leaders, and annual updates and progress (as appropriate).

The BHSET Board reviewed and adopted the 2025 Community Health Needs Assessment and Implementation Plan on March 24, 2025.

Priority #1: Access to Mental and Behavioral Health Care Services and Providers

Rationale:

Data suggests that residents in Jefferson and Orange Counties do not have adequate access to mental and behavioral health care services and providers. Jefferson and Orange Counties have a higher ratio of patients per mental health care provider as compared to the state as well as the nation. Both Jefferson and Orange Counties have a higher percentage of adults with depression and adults who expressed they had frequent mental distress than the state.

Many interviewees mentioned the underserved population, specifically, as experiencing difficulties accessing mental and behavioral health resources. One interviewee stated: "...In terms of the underserved population (low income, homeless, etc.), we have a strong sector of the community with mental health issues. They are plaguing law enforcement and the jail system. There is some available inpatient care, but it is not nearly adequate..." Several interviewees expressed excitement for the expansion of the BHSET mental and behavioral health facility and the psychiatry residency program. One interviewee stated: "...we are excited about the expansion of the mental health facility at Baptist. I know law enforcement is excited about it." Another interviewee stated: "Baptist has recently started a psychiatry residency program and hopes to retain some of them in the community."

There were conflicting interviewee comments about accessibility to see a mental and behavioral healthcare provider. One interviewee stated: "It's easy to get in to see a therapist. It's fairly easy to see a psychiatrist." Another interviewee stated: "It's more difficult than it should be. People don't know how to access the provider in a timely manner." A couple of interviewees expressed desire for more education about local, available programs to improve mental and behavioral health access. Interviewees also discussed long wait times and how that may potentially worsen mental health conditions. One interviewee stated: "...You may set up an appointment four weeks after something comes up, but in four weeks, things can go downhill pretty fast. We don't have enough mental health services or training in the area for mental health issues."

Interviewees also discussed the need for additional mental and behavioral health providers accepting insurance. One interviewee stated: "There's a lot of people in the community who have insurance looking for psychiatric care. There are not a lot of providers for private pay. A few take cash payments but don't take insurance because they don't want to deal with the hassle. That's difficult for the people who need the care and pay cash." Lastly, one interviewee noted appreciation for telehealth options for mental health. One interviewee: "I love telehealth, including for mental health. I use it especially for therapy."

Several interviewees discussed needs for adolescent mental health services, specifically a need for more psychiatric rehab services. A couple interviewees noted the increased drug use among the youth population. One interviewee mentioned the growing mental health issues and demand for services is leading to long wait times as well as some local psychiatrists who are not accepting certain insurances which is leading to limited access to psychiatric care. One interviewee stated: "Mental health is a big and expanding issue for the youth. We are seeing kids now who have no coping skills. So many kids are suicidal and can't deal with school or family life. The demand for services has skyrocketed. Almost all kids now have CHIP and Medicaid if they don't have private insurance. However, the lack of psychiatric coverage is concerning. We have about four psychiatrists and APRNs that do psychiatric care. Outside of that, there are only 1-2 in the region, and they generally work with commercial private insurance. It takes about two months to get in to see a psychiatrist. It's gotten better but I don't see it improving much."

Objective:

Provide a point of access for mental health services in the community

Implementation Activity	Responsible Leader(s)	FY 2026		FY 2027		FY 2028	
		Status	Progress Updates	Status	Progress Updates	Status	Progress Updates
1.A. BHSET partners with the local mental health authority, Spindletop Center, to offer inpatient psychiatric services for unfunded patients, as well as State Hospital beds.	Administrator of Behavioral Health & Residency Programs						
1.B. Through grant funding, BHSET offers behavioral health services for children age 6 to 12 years through its Behavioral Health Center. The inpatient care program is provided for those children with mental illness who are in need of 24-hour hospitalization, and is designed to increase problem solving and communication skills and enhance self-esteem. BHSET also offers a transition to outpatient treatment for those who are ready as well.	Administrator of Behavioral Health & Residency Programs						
1.C. In addition to recruited psychiatrists, BHSET offers UTMB resident services on the weekends and SHSU medical students on rotation, as well as a Psychiatry Residency program with 5 residents per year.	Administrator of Behavioral Health & Residency Programs, Vice President of Operations						

Implementation Activity	Responsible Leader(s)	FY 2026		FY 2027		FY 2028	
		Status	Progress Updates	Status	Progress Updates	Status	Progress Updates
1.D. BHSET Behavioral Health leaders and clinicians will be available to speak at local schools and community organizations promoting mental or behavioral health education on an as-needed basis.	VP of Marketing & Communications, Administrator of Behavioral Health & Residency Programs						
1.E. BHSET is an active member of the Community Mental Health Consortium, including all 3 hospitals in the area as well as law enforcement and EMS services, that meets periodically to discuss how to better address mental health services in the community.	Administrator of Behavioral Health & Residency Programs						
1.F. BHSET will continue to provide geriatric psychiatry services through its Senior Care Unit.	Administrator of Behavioral Health & Residency Programs						
1.G. Upon discharge from the Behavioral Health Center, patients may seek available services through the Outpatient Program to continue their care as needed.	Administrator of Behavioral Health & Residency Programs						
1.H. BHSET offers electroconvulsive therapy (ECT) services, as the only facility to offer such services between Houston, TX and New Orleans, LA.	Administrator of Behavioral Health & Residency Programs						
1.I. BHSET offers art, play, and music therapy services for patients who may benefit from such services.	Administrator of Behavioral Health & Residency Programs						
1.J. BHSET provides Integrated Care using the Collaborative Care Model.	Administrator of Behavioral Health & Residency Programs						

Priority #2: Continued Recruitment & Retention of Healthcare Workforce

Rationale:

Data suggests both Jefferson and Orange Counties have a higher ratio of patients per primary care provider as compared to the state as well as the nation. Orange County has a higher ratio of patients per dental care provider as compared to the state as well as the nation. Jefferson County has a higher percentage of preventable hospital events per 100,000 when compared to the state. Additionally, both counties have several Health Professional Shortage Area designations as defined by the U.S. Department of Health and Human Services Health Resources and Services Administration (HRSA).

With regards to specialty care, interviewees expressed appreciation for the hospital's use of telemedicine for specialty care appointments. One interviewee stated: "Baptist has done such a great job with telemedicine, which I think is super helpful." However, interviewees had conflicting comments on wait times for specialty care services. There were conflicting comments regarding wait times for specialty care services in the area. One interviewee stated: "I would say specialty care has a wait time of 2 to 3 weeks to see a specialist," while another interviewee stated, "Conservatively, it's a couple of months to see a specialist but sometimes it could be even longer."

Several interviewees discussed the need for pediatric subspecialties. One interviewee stated: "We have a lot of pediatricians, but in terms of specialists, there does seem to be a gap." Interviewees noted that some patients prefer to see a physician over an advanced practitioner. One interviewee stated: "I think accessibility is okay, but that definitely depends on the size of the practice and how busy they are. With specialists, I know a lot of patients don't like seeing mid-level providers." Interviewees mentioned appreciation for the local cancer center saying, "I've heard people are very happy with our cancer center we have in Beaumont. I've come across people who decide to stay here for their cancer treatment instead of going to Houston, which speaks volumes." A couple interviewees noted the high turnover of OB/GYN providers which is leading to limited availability of services. One interviewee stated: "There seems to be a lot of turnover with local facilities and practitioners for women's health. In Orange, it really just provides screenings, ultrasounds, and preventative scans, like mammograms. There is nothing in Orange County, so people go to Jefferson County or some folks go to Lake Charles for that type of service."

A couple interviewees mentioned the limited accessibility to local specialty care services which is leading to outmigration to Houston and Lake Charles as well as challenges in seeing certain specialty care providers, particularly for the Medicaid population. One interviewee stated: "Most specialists do not accept Medicaid at all, traditional or managed care, with the exception of a couple of cardiologists in town who only see a limited number of Medicaid patients." Specific specialties mentioned as needed include Neurology (general and pediatric), Gastroenterology, Mental health, OB/GYN, Cardiology, Dermatology, Endocrinology, Oncology, Orthopedics and Pulmonology.

With regards to dental care, interviewees discussed the limited access to pediatric and specialized dentists in Orange County. Additionally, there were conflicting interviewee opinions on the accessibility of local dentists as well as mentions about the lack of prioritization of dental health due to: cost of care and inadequate insurance coverage. One interviewee stated: "I feel like we have plenty of dentists. There are very few pediatric dentists. Other than that, parents just bring their kids to their regular dentist." Another interviewee stated: "I do not think there's an adequate number of dentists. A lot of people don't seek dental care as a focus. In some areas, it's seen as expensive and unaffordable." Another interviewee stated: "It's pretty accessible, but the frustrating part is that it is expensive, and insurance often does not cover it. If it does, it's at a minimum level that people can't afford. Some dentists might offer reduced prices, but I have not seen that myself. Dentists do root canals and crowns. Some do it in-office, and some refer to a specialist. If you are in pain, you can get in to be seen in a pretty good amount of time."

A couple interviewees noted the perceived limited access to care due to local dentists not accepting new patients. It was mentioned that there's a greater difficulty for certain populations like the indigent, or those with Medicaid in accessing dental care providers. One interviewee stated: "For our indigent population, there's a bit of a struggle. There aren't a lot of providers that accept state payment for dental care." Lastly, a couple interviewees acknowledged that there are local dental options that assist certain populations like the indigent or those with Medicaid. One interviewee stated: "People with dental insurance find accessibility pretty fast. For Medicaid clients, there are dental centers, like Lovett Dental in town that generally meets the needs of that population. We have dental centers with multiple services and prices for Medicaid and Managed Medicaid patients. For certain uninsured patients, they can receive some care but it's extremely limited. Lamar University still has a dental hygiene program, so patients can go get free dental cleanings."

It was noted from interviewees that there are difficulties recruiting providers to the area due to the perceived poor quality school system. One interviewee stated: "I would focus on engaging providers to stay here and improving the local infrastructure and schools. That is a major draw for families wanting to raise children. A lot of times we get people here to talk to them but Beaumont is not really pretty on the outside. We have a poorly-rated school district. I think we have trouble getting people in the door."

Objective:

Continued efforts to recruit and retain providers to the community

Implementation Activity	Responsible Leader(s)	FY 2026		FY 2027		FY 2028	
		Status	Progress Updates	Status	Progress Updates	Status	Progress Updates
2.A. BHSET recently completed its Medical Staff Development Plan to outline a physician/provider recruitment plan for the next few years, and will use this report as a roadmap for its recruitment efforts. Additionally, BHSET will use the report to explore opportunities to expand access to services in the primary and secondary service areas.	Director of Business Development						

Implementation Activity	Responsible Leader(s)	FY 2026		FY 2027		FY 2028	
		Status	Progress Updates	Status	Progress Updates	Status	Progress Updates
2.B. BHSET will continue its Baptist Hospital School of Radiological Technology, which has been accredited by the American Board of Health Education Services (ABHES), to provide accepted students with clinical rotation education over a span of 2 years. Students graduate with an Associate's degree.	Director of the Radiology School						
2.C. BHSET will continue to serve as a teaching facility for Radiology, RN, Respiratory Therapy, Pharmacy and Dietetics students.	Director of Education						
2.D. BHSET will provide rotations for 3rd and 4th year medical students at Sam Houston State University, and rotations for 3rd and 4th year obstetric students at UTMB.	Medical Director of Behavioral Health						
2.E. BHSET will continue its partnership with the Legacy Clinic and local OB/GYNs to coordinate deliveries at the hospital for the underserved populations.	Director of Women's Services						
2.F. BHSET will continue to connect with local individuals interested in medical careers as early as possible in an attempt to encourage students to remain local. Additionally, BHSET offers tuition reimbursement and financial assistance opportunities for clinical and non-clinical degrees for individuals in the community.	VP of Human Resources						
2.G. BHSET will continue to offer an Internal Medicine Residency Program and Psychiatry Residency Program, with plans to expand into other specialties as opportunities arise.	Administrator of Behavioral Health & Residency Programs						
2.H. BHSET will continue to host educational wellness programs with partners in education and the Health and Occupational Safety Association (HOSA) organization to provide education on a variety of topics. The programs are provided to both school staff as well as students and supplies are provided as needed.	VP of Marketing & Communications, Director of Volunteer Services						

Priority #3: Prevention, Education and Services to Increase Community Awareness and Address High Mortality Rates, Chronic Diseases, Preventable Conditions and Unhealthy Lifestyles

Rationale:

Data suggests that higher rates of specific mortality causes and unhealthy behaviors warrants a need for increased preventive education and services to improve the health of the community. Heart disease and cancer are the two leading causes of death in Jefferson and Orange Counties and the state. Jefferson and Orange Counties have higher mortality rates than Texas for the following causes of death: diseases of heart; malignant neoplasms; COVID-19; chronic lower respiratory diseases; Alzheimer's disease; accidents (unintentional injuries); cerebrovascular diseases; diabetes mellitus; nephritis, nephrotic syndrome and nephrosis; chronic liver disease and cirrhosis; breast cancer (female); and lung and bronchus cancer. Additionally, Jefferson County has a higher colon & rectum cancer mortality rate than the state.

Both Jefferson and Orange Counties have higher prevalence rates of chronic conditions such as diabetes for Medicare population, obesity for the adult and Medicare population, arthritis (adult), asthma (adult), hypertension for the Medicare population and those with a disability (adult) than the state. Both counties have higher percentages of residents participating in unhealthy lifestyle behaviors such as physical inactivity, binge drinking and smoking than the state. Jefferson County has a higher prevalence rate for adults with diabetes than the state. With regards to maternal and child health, Jefferson and Orange Counties have higher rates of low birth weight births, higher rates of premature births and higher teen (age 0-19 years) birth rates than the state. Data suggests that Orange County residents are not appropriately seeking preventive care services, such as timely mammograms for Medicare beneficiaries and those Medicare beneficiaries who have ever received the pneumonia vaccine. Both Jefferson and Orange Counties have a lower percent of Medicare beneficiaries who have received their flu vaccine in the past year. Jefferson County has higher prevalence rates of communicable diseases such as chlamydia, gonorrhea and HIV/AIDS than the state.

Several interviewees expressed appreciation for the local programs and resources in the community, including but not limited to: preventative screenings; the local food bank; parks and walking trails; and BHSET hosted events. One interviewee stated: "Prevention is always the hardest part. We do have a lot of programs focused on breast and prostate health. We have a local food bank here. There are some parks and walking trails. Compared to a lot of cities, we are in pretty good shape." Another interviewee stated: "For our area, we have a substantial amount of resources available for health and fitness. You can't make anybody take advantage of them. There are people in the fitness community who say our community doesn't do enough. If you've lived in other cities, this city has average, if not above-average, resources for its size."

Interviewees emphasized the desire for more options or resources for those who are lower income as well as the need for better access to healthy food options and education about nutrition. One interviewee stated: "I wish there were more cost-effective options for the lower-income. We have a bunch of gyms in the area but some won't be able to afford the membership." Another interviewee stated: "There are a lot of studies regarding food deserts in our area and several initiatives to address that. Access around healthy eating and being intentional about it is essential." Interviewees brought up several chronic conditions and risky behaviors that they've seen in the community like: cancer; diabetes; hypertension; substance abuse; and increased syphilis rates. One interviewee stated: "A lot of areas are affected by the refineries. The cancer rate is high and the diabetes rate is elevated due to diet. Diabetes is a huge issue, along with uncontrolled hypertension and substance abuse." One interviewee expressed a desire for increased community education surrounding healthy lifestyle behaviors. One interviewee stated: "Having more community outreach and education on preventable issues, like healthier lifestyles, is crucial. Diabetic patients often don't eat right, don't take their meds, and don't see doctors regularly. If we had more education that goes out into the field, it could make a difference."

It was noted by several interviewees that there are high levels of food insecurity and the limited amount of local grocery stores is leading to poor nutrition and a range of health problems. One interviewee stated: "Health concerns related to food insecurity are critical. When families don't have access to food, it leads to other problems. A grocery store in Vidor, TX is closing, and there's another in the south end of Beaumont that is also closing. Not having a grocery store close by is definitely a struggle, leading to issues with diabetes, hypertension, and other chronic diseases that can be impacted by poor health decisions and options." One interviewee discussed an opportunity for enhanced collaboration among organizations as well as a need for additional green spaces and wellness programs to help promote healthy lifestyle choices and improve quality of life. One interviewee stated: "We should be putting in some green spaces and have community wide wellness initiatives. More collaboration among healthcare entities in the area is essential. It's not just about the money; it's about working together to identify solutions." Lastly, one interviewee expressed the desire to see a YMCA come into Beaumont and stated: "Quality of life is at the top of my list. That includes providing amenities that encourage people to get outside. Building healthier lifestyles through parks, trees, walking paths, bike paths, and wide open spaces where people can safely play. We used to have a YMCA. A facility like that would allow families to gather and make it affordable for them to participate in different programs, like learning to swim."

Objective:

Implement programs and provide educational opportunities that seek to address unhealthy lifestyles and behaviors in the community

Implementation Activity	Responsible Leader(s)	FY 2026		FY 2027		FY 2028	
		Status	Progress Updates	Status	Progress Updates	Status	Progress Updates

Implementation Activity	Responsible Leader(s)	FY 2026		FY 2027		FY 2028	
		Status	Progress Updates	Status	Progress Updates	Status	Progress Updates
3.A. BHSET will continue to reach out to the community by offering numerous classes, speakers and other informative activities. Additionally, hospital personnel are made available as speakers for civic groups, industrial partners, media appearances, public service announcements and health fairs to address health topics of particular concern to the public.	VP of Marketing & Communications						
3.B. BHSET will continue to engage in a variety of employee wellness initiatives, including: promoting employee and family wellness via Marquee Health and the Hospital Wellness Committee; offering need-specific special programs; CHIP (Coronary Health Improvement Plan); weight management; discounted gym membership offerings; charitable fitness events; and providing mental health education through the Employee Assistance Program & Critical Incident Management Team.	VP of Human Resources						
3.C. BHSET will strive to maintain designation as a Texas Ten Step Facility by the Department of State Health Services and the Texas Hospital Association. Additionally, BHSET purchased and fully implemented a lactation pod.	Director of Women's Services						
3.D. BHSET will continue to participate in the annual Women's Conference to provide education to women in the community.	VP of Marketing & Communications						
3.E. BHSET personnel serve in leadership roles and as volunteers with many agencies and committees in the community.	VP of Marketing & Communications						
3.F. BHSET will continue to provide HIV Education in partnership with a grant from Texas Department of State Health Services to provide free HIV screening and linkage to care for HIV positive patients. Additionally, BHSET will support communicable disease prevention and education in the community including a focus on World AIDS Day and educational speakers.	HIV Screening Program Coordinator						
3.G. The SmartHealth Clinic will continue to partner with the Beaumont Health Department to provide screenings for their patients who access services for Hep C and other STI care.	HIV Screening Program Coordinator						

Implementation Activity	Responsible Leader(s)	FY 2026		FY 2027		FY 2028	
		Status	Progress Updates	Status	Progress Updates	Status	Progress Updates
3.H. BHSET will host and/or support charitable events and opportunities for the community throughout the year	VP of Marketing & Communications						
3.I. BHSET will continue implementation of the CIHQ Stroke Certified Program and grow the Stroke Education Program targeting the following counties: Hardin, Orange, Jasper, Jefferson, and Tyler Counties. This will include educational programs on the prevention of vascular diseases related to strokes, quarterly stroke meetings and community and employee educational events.	Chief Nursing Officer						
3.J. BHSET will continue to offer clinical trials in conjunction with UTMB and other industry sponsors.	Nurse Manager of Clinical Research						
3.K. BHSET will continue to support and/or participate in roundtable events (physicians, NPs, pastors, etc.) to better educate various providers and community members on services available locally.	VP of Marketing & Communications						
3.L. BHSET will continue to increase awareness of its primary and specialty care service offerings in the community through various media outlets and advertisements.	VP of Marketing & Communications						
3.M. BHSET will continue providing cancer-related genetic testing to help patients assess their cancer risk and support preventive screening efforts.	Director of Imaging						

Priority #4: Need for Increased Emphasis on a Collaborative Continuum of Care

Rationale:

Interviewees mentioned the need for additional education on healthcare options as well as the difficulty educating the community due to the lack of a unified way to reach patients. One interviewee stated: "Communication is key. We have people willing to teach these individuals, but we don't have a way to effectively reach them because there isn't a single source where they get their information. It's hard to get a good turnout. There are several pockets in the county that don't have internet access." Interviewees noted the perceived delaying or foregoing care due to lack of knowledge about healthcare. A few interviewees discussed the lack of understanding next health steps or seeking follow up care leading to patient readmissions. One interviewee stated: "The back of the discharge papers has information. But does the patient read it and comprehend it? They aren't going to look at that. Finding a way to close the loop on that is important. A lot of times, the patient will be back in 90 days." Interviewees discussed the need for more community engagement and marketing of local resources due to challenges in reaching vulnerable populations and the lack of awareness of existing programs and resources. One interviewee stated: "There's a lot going on that's not hitting everyone. They're trying to find ways to reach the homebound folks or the people who are really having issues. The hospital is doing a good job in hosting events, but there's a challenge in reaching the most vulnerable." Another interviewee stated: "You don't see many people doing outdoor activities. There aren't a lot of communities that have sidewalks. I don't see much healthy eating or marketing around our food banks and I know they are active here."

It was noted by interviewees that knowledge deficits of available services is leading to use of the ER, particularly for the low income and uninsured populations. Interviewees mentioned confusion about the appropriate healthcare facility to use based on patient's symptoms leading to: overuse of the ER and using EMS for non-emergent situations. One interviewee stated: "You have the hospital ER, freestanding ERs, 'doc-in-a-box' and urgent cares. How do people know where to go? Which one is really the appropriate option when you don't have a primary care provider? I think some people know, and others will just go to the ER thinking it's urgent care. I do think this is very confusing." Another interviewee stated: "A lot of people don't know what an emergency is and what is not. They are scared, but once EMS gets there and triages and makes the assessment, then they don't want to go. Some need to go and refuse, while others demand to go but don't really need emergency care." Lastly, the need for education on insurance implications of selecting one type of facility over another for emergency care was mentioned by a couple interviewees. One interviewee stated: "There might need to be a heightened awareness of when to go to the private ER versus the hospital ER. There is some misunderstanding about insurance and what they cover at hospital ERs vs freestanding ERs. There could probably be some public service announcements that could run to build awareness."

Objective:

Participate in initiatives that improve the patient experience as he or she transitions through the continuum of care

Implementation Activity	Responsible Leader(s)	FY 2026		FY 2027		FY 2028	
		Status	Progress Updates	Status	Progress Updates	Status	Progress Updates
4.A. BHSET provides varying support groups and classes to encourage follow-up and continued education for patients during and after an illness. BHSET initiates support groups and educational classes for patients and family members based on demand for the programs.	VP of Marketing & Communications						
4.B. BHSET will continue to partner with EMS to promote better health and improved emergency medicine services in the community. Meetings also address issues in accessing emergency care in the community and encourage collaboration.	Director of Emergency Services						
4.C. BHSET's nurse navigators collaborate with patients to ensure follow-up appointments are scheduled upon discharge. They also provide guidance on insurance coverage, explain the care received, and offer education to enhance patients' understanding of their treatment and the next steps in their care journey.	VP of Marketing & Communications						

Priority #5: Access to Affordable Care and Reducing Health Disparities Among Specific Populations

Rationale:

Data suggests that some residents in the study area may face significant cost barriers when accessing the healthcare system. Jefferson and Orange Counties have higher unemployment rates than the state, as well as lower educational attainment rates than the state. Both Jefferson and Orange Counties have a lower median household income than the state, a higher percentage of families living below poverty than the state, a higher percentage of overall food insecurity, child food insecurity and a higher average meal cost when compared to the state. Jefferson County has a higher percentage of children living in poverty as well as a higher percentage of school students eligible for free or reduced price lunch. Jefferson and Orange Counties have a higher percentage of recipients who qualified for Supplemental Nutrition Assistance Program (SNAP) benefits and a lower percentage of those who graduated high school within four years than the state. Jefferson County also has a higher percent of people who do not own a motor vehicle when compared to the state.

Jefferson County has a higher rate of those adults (age 18-64) who are uninsured as compared to the state. When analyzing economic status in both counties, Jefferson County is in more economic distress than Orange County and other counties in the state. Additionally, Jefferson and Orange Counties are designated as Medically Underserved Areas, as defined by the U.S. Department of Health and Human Services Health Resources and Services Administration (HRSA).

Interviewees mentioned transportation barriers that are hindering access to care for specific groups such as individuals living in outlying areas as well as the low income and working poor. One interviewee stated: "Transportation and the lack of co-located providers are significant problems. Your primary care provider may be here, but you might have to travel somewhere else for a specialist or a procedure. For some of our outlying counties, it's harder." Additionally, several acknowledged that telemedicine has improved access to some, but rural areas still lack accessibility. One interviewee stated: "In general, rural accessibility to physicians or nurse practitioners is a significant concern. We've seen some improvement with telehealth, but there are still some rural pockets that lack accessibility—like Fannett."

Interviewees discussed the struggle between paying for medication versus essential expenses, particularly for the uninsured. One interviewee stated: "People are unable to afford their medication. It has to do with cost, especially for those without insurance. 'Do I pay for my medicine or my electricity?' Many people are walking around with hypertension but have no means of obtaining blood pressure medication." It was noted several times that the limited health options in the area are leading to ER and/or urgent care use which results in expensive bills. Additionally, a few interviewees perceived the overprescribing of medications for certain conditions is leading to increased costs and use of insurance. One interviewee stated: "Healthcare is expensive partly because we medicate a large percentage of problems that don't require medication. This makes care more expensive and necessitates insurance."

When discussing those individuals who may need long term care in the community, several interviewees noted the lack of local long term facilities leading to challenges like: transportation barriers, proximity to family and foregoing care. One interviewee stated: "We don't have any long-term care facilities or in-between options where they need to go for a few weeks to a month, like for a PICC line. They don't have transportation, so they stay in mid-county, which is an hour's drive. If they had a little bit of family support, that would help, but there just aren't those types of facilities. They go home, don't recover, and it's just a cycle. They come back to the hospital." Lastly, a couple interviewees expressed desire for more collaborative support during a patient transition from one health setting to the next. One interviewee stated: "Perhaps we could streamline communication from one physician to another. If you have a heart condition, it would be helpful for your primary care physician to receive that information directly. Maybe just more cohesiveness of the doctors working together to help you. [Having] more of a team mindset when addressing the health of the patient." Another interviewee stated: "There are challenges in the transitional phase. Is the initial entity following through to conclusion, or are they saying it's your responsibility now? It needs to be more collaborative and follow that patient whether that's verbal or otherwise. Transitioning to physical therapy from heart surgery was challenging. Even though it was in the same building, it felt like we were dealing with two separate businesses."

With regards to the elderly population, interviewees acknowledged that there is food insecurity for the elderly population, specifically for those that are homebound. Additionally, several interviewees discussed the difficulty navigating the different Medicare insurance options. One interviewee stated: "Navigating Medicare options is hard for the elderly to do. It's hard to find the right plan that fits you." One interviewee mentioned that there are limited facilities and services for people with Alzheimer's or who are in need of dementia care. It was noted that there is a need for additional education and assistance with local resources in the area. One interviewee stated: "Many seniors need an explanation of 211 services at the state level. A lot of times, extra help is needed. You have a lot of seniors who cannot navigate the system by themselves."

Several interviewees discussed the transportation barriers and limited housing options for the elderly. The low income senior population was discussed by a few interviewees as facing a greater challenge in affording medications and health care services. One interviewee stated: "A lot of the Medicare-eligible people are also low-income, so they're having a hard time paying copays or utility bills. Maybe adherence to their medication has everything to do with their financial situation and not them wanting to take it."

A couple of people mentioned the elderly population going to Houston for specialty care and limited support systems for the elderly which is leading to isolation. One interviewee mentioned the elderly have a desire to be seen by a physician versus an advanced practice provider. One interviewee stated: "I feel like when my in laws go to the doctors, sometimes they don't even see their doctor. They see a nurse practitioner." It was noted that there is a need for enhanced coordination and communication amongst providers for patient care by a couple interviewees. Lastly, one interviewee mentioned that a local pharmacy was closing and this will cause issues accessing medication. One interviewee stated: "We have one neighborhood in the north end of town and the Walgreens will close its doors in two weeks, so that will create a medication desert. The closest pharmacy by walking distance is 40 minutes away. There are some senior living apartments there and they will be out of medication access."

Priority #5: Access to Affordable Care and Reducing Health Disparities Among Specific Populations

Rationale:

When thinking about the youth population specifically, interviewees discussed how the lack of a children's hospital is leading to outmigration or transferring patients to Houston. Additionally, interviewees mentioned the need for more recreational activities for the youth as well as migration of rural communities to Beaumont for care. One interviewee stated: "The quality of life for kids is lacking in terms of safe activities during their free time. The city has some great parks, but we are lacking traditional recreational and entertainment opportunities for the youth and the population at large. In terms of their health, we struggle with pediatric care in Beaumont. We go to Beaumont for doctors appointments and a large percentage of the population is doing the same thing—either Beaumont or Port Arthur." A couple interviewees noted the need for increased education on preventive care for the youth. One interviewee stated: "We get a lot of graduates who either stay with their parents, move out, get a job, or get their own place. Kids aren't being taught the importance of annual exams, making doctors visits a routine priority. So many from the younger generation don't like calling or talking on the phone so they don't make an appointment. Education on these aspects is important as they prepare for adulthood." Lastly, there was concern by one interviewee about legislative efforts surrounding childhood immunizations which is leading to potential resurgence of preventable diseases. One interviewee stated: "In Texas, we have lawmakers trying to do away with childhood immunizations to attend school. I'm afraid that we will see a resurgence of diseases. A recent story discussed two teenagers who returned from a trip with rubella."

When asked about which specific groups are at risk for inadequate care, interviewees spoke about teenagers/adolescents, elderly, low income/working poor, obstetric, racial/ethnic, Orange County residents, Hardin County residents, homeless and veterans. With regards to the teenagers/adolescents population, interviewees discussed the need for better quality of education; the need for mental health services, especially long term psychiatric care; healthy lifestyle and preventive care education; limited recreational activities; lack of a local children's hospital; resources for teen pregnancy; drug abuse; and the need for post-foster care programs. For the elderly population, interviewees discussed transportation barriers; dementia, Alzheimer's disease; food insecurity; and cost barriers to care. Low income/working poor residents were brought up as a subgroup of the population that may be disproportionately affected by the need for accessible childcare; cost barriers to care and insurance coverage; hourly shift limitation; long wait times for appointments; transportation barriers; limited availability of affordable housing; and education on establishing a primary care provider and how to take care of oneself. For the obstetric population, interviewees discussed the desire for more female providers.

Racial/ethnic groups were discussed as having a growing Hispanic population; underinsured, particularly for the Hispanic and African Americans; language barriers, particularly for the Hispanic; transportation barriers; perceived racial tension; fear of deportation; cultural challenges (Vietnamese, Hispanic, African American); and limited access to care (limited income, long wait times). Specifically for Orange County residents, interviewees discussed the limited adequate housing; lack of pediatric dentists; and transportation barriers. For Hardin County residents, interviewees discussed the lack of pediatricians; and that there is no county food bank. Homeless residents were discussed as being disproportionately challenged by a growing population, migrant as well as local homelessness; the limited number of shelters in the community, especially bridge housing; difficulty accessing shelters due to organization policies; mental health and drug abuse concerns; limited affordable housing; and fragmented continuum of care. Lastly, for the veteran population, interviewees discussed outmigration due to lack of a nearby VA hospital; limited services available at the local VA clinic; the growing population; lack of education surrounding veteran benefits and what is available; mental health concerns; some homelessness; transportation barriers; challenges with providers accepting VA insurance; and lack of access to mental/behavioral health services.

Objective:

Implement and offer programs that aim to reduce health disparities by targeting specific populations

Implementation Activity	Responsible Leader(s)	FY 2026		FY 2027		FY 2028	
		Status	Progress Updates	Status	Progress Updates	Status	Progress Updates
5.A. The on-site SmartHealth Clinic at BHSET is designed to follow up with high-risk, recently discharged emergency room patients who have chronic diseases such as acute heart failure, COPD, diabetes and/or hypertension. Patient demographics include uninsured, indigent, Medicaid and underserved. Patients are screened for Social Determinants of Health (SDoH), including transportation needs, or low-cost/free health resources. When identified, navigators at the clinic perform a more focused evaluation and offer interventions as needed to assist them in finding programs and services that they might qualify for in the community.	Director of SmartHealth						

Implementation Activity	Responsible Leader(s)	FY 2026		FY 2027		FY 2028	
		Status	Progress Updates	Status	Progress Updates	Status	Progress Updates
5.B. BHSET will continue its contract with a third party vendor to assist patients in getting them signed up for any health coverage that they may qualify for and also assists in helping mothers and their babies sign up for Medicaid and CHIP.	Director of Patient Access						
5.C. BHSET will continue to coordinate events during designated months, such as stroke awareness in May, prostate cancer in September, breast cancer awareness in October, and lung cancer awareness in November that may include the provision of low cost or free related screening services.	VP of Marketing & Communications						
5.D. BHSET will continue to provide emergency coverage for uninsured patients for primary and specialty care services.	Director of Emergency Services						
5.E. BHSET will continue to increase access to care through the provision of telehealth services to applicable patients.	Chief Nursing Officer, Director of Emergency Services						
5.F. BHSET partners with community organizations to host a variety of free health screenings which can include blood pressure, weight, glucose, mammography, pulmonary function, diabetes and heart disease on an as needed basis.	VP of Marketing & Communications						
5.G. BHSET offers low pricing for imaging and lab services for employees, and has contracted with Emergency Room physicians to lower pricing on services for employees as well. Additionally, urgent care services are in-network for employees.	Director of Managed Care & Materials Management						
5.H. BHSET will continue to provide free or low-cost immunizations to local private and public school faculty & other community members, which may include influenza, MMR, Tdap, and pneumonia vaccinations, as well as TB skin tests.	VP of Marketing & Communications						

Section 3:

Feedback, Comments and Paper Copies

INPUT REGARDING THE HOSPITAL'S CURRENT CHNA

CHNA Feedback Invitation

- IRS Final Regulations require a hospital facility to consider written comments received on the hospital facility's most recently conducted CHNA and most recently adopted Implementation Strategy in the CHNA process.
- Baptist Hospitals of Southeast Texas invites all community members to provide feedback on its existing CHNA and Implementation Plan.
- To provide input on this CHNA, please see details at the end of this report or respond directly to the hospital online at the site of this download.

Feedback, Questions or Comments?

Please address any written comments on the CHNA and Implementation Plan and/or requests for a copy of the CHNA and Implementation Plan to:

Stephanie Harris, VP of Marketing & Communications

Baptist Hospitals of Southeast Texas

3080 College Street
