

Dauphin

WOMEN'S CENTER

3D MAMMOGRAPHY NOW AVAILABLE

The **Dauphin Women's Center** utilizes breast tomosynthesis which is a three dimensional imaging technology that uses a low-dose short X-ray sweep around the compressed breast with only nine exposures. This imaging technique is designed to separate the tissues and to reduce the overlapping of structures, which represents a limiting factor in standard 2D mammography.

Due to its low dose and clinical accuracy, this system has the potential to replace digital mammography exams in screening to detect breast cancer.

For more information on mammograms, please contact the

Dauphin Women's Center
